Attn: CAIR Reporting Office

Dear Sirs;

Enclosed you will find the CAIR Reporting Form, along with all pertinent attachments and information.

We believe form is complete and accurate. Should there be any questions, please feel free to contact us at anytime.

Sincerely,

Max Aronoff
General Manager

SECTION 1 GENERAL MANUFACTURER, IMPORTER, AND PROCESSOR INFORMATION

PART A GENERAL REPORTING INFORMATION

1.01 This Comprehensive Assessment Information Rule (CAIR) Reporting Form has been completed in response to the Federal Register Notice of..... [1][2] [2][2] [8][8]
CBI mo. day year

☐ a. If a Chemical Abstracts Service Number (CAS No.) is provided in the Federal Register, list the CAS No. [0][2][6][4][7][1]-[6][2]-[5]

b. If a chemical substance CAS No. is not provided in the Federal Register, list either (i) the chemical name, (ii) the mixture name, or (iii) the trade name of the chemical substance as provided in the Federal Register.

(i) Chemical name as listed in the rule N/A

(ii) Name of mixture as listed in the rule

(iii) Trade name as listed in the rule

c. If a chemical category is provided in the Federal Register, report the name of the category as listed in the rule, the chemical substance CAS No. you are reporting on which falls under the listed category, and the chemical name of the substance you are reporting on which falls under the listed category.

Name of category as listed in the rule N/A

CAS No. of chemical substance [][][][][][]-[][]-[]

Name of chemical substance

1.02 Identify your reporting status under CAIR by circling the appropriate response(s).

CBI Manufacturer 1

☐ Importer 2

Processor (3)

X/P manufacturer reporting for customer who is a processor 4

X/P processor reporting for customer who is a processor 5

☐ Mark (X) this box if you attach a continuation sheet.

1.03 Does the substance you are reporting on have an "x/p" designation associated with it in the above-listed Federal Register Notice?

CBI
☐ Yes ☒ Go to question 1.04
☐ No ☐ Go to question 1.05

1.04 a. Do you manufacture, import, or process the listed substance and distribute it under a trade name(s) different than that listed in the Federal Register Notice? Circle the appropriate response.

CBI
☐ Yes 1
☐ No 2

b. Check the appropriate box below: N/A

☐ You have chosen to notify your customers of their reporting obligations
Provide the trade name(s)

☐ You have chosen to report for your customers

☐ You have submitted the trade name(s) to EPA one day after the effective date of the rule in the Federal Register Notice under which you are reporting.

1.05 If you buy a trade name product and are reporting because you were notified of your reporting requirements by your trade name supplier, provide that trade name.

CBI
Trade name Lupranate T80-Mondurtd-Voranatet-80-
Rubinate TDI

☐ Is the trade name product a mixture? Circle the appropriate response.

Yes 1
No by EPA definition 2

1.06 Certification -- The person who is responsible for the completion of this form must sign the certification statement below:

CBI
☐ "I hereby certify that, to the best of my knowledge and belief, all information entered on this form is complete and accurate."

Max Aronoff

TITLE

(312) 496 - 8607

TELEPHONE NO.

☐ Mark (X) this box if you attach a continuation sheet.

- 1.07 Exemptions From Reporting -- If you have provided EPA or another Federal agency with the required information on a CAIR Reporting Form for the listed substance within the past 3 years, and this information is current, accurate, and complete for the time period specified in the rule, then sign the certification below. You CBI ☐ are required to complete section 1 of this CAIR form and provide any information now required but not previously submitted. Provide a copy of any previous submissions along with your Section 1 submission.

"I hereby certify that, to the best of my knowledge and belief, all required information which I have not included in this CAIR Reporting Form has been submitted to EPA within the past 3 years and is current, accurate, and complete for the time period specified in the rule."

1.16 For each classification listed below, state the quantity of the listed substance that was manufactured, imported, or processed at your facility during the reporting year.

CBI

<u>Classification</u>	<u>Quantity (kg/yr)</u>
<input type="checkbox"/> Manufactured	<u>NA</u>
Imported	<u>NA</u>
Processed (include quantity repackaged)	<u>2,961,000</u>
Of that quantity manufactured or imported, report that quantity:	
In storage at the beginning of the reporting year	<u>NA</u>
For on-site use or processing	<u>NA</u>
For direct commercial distribution (including export)	<u>NA</u>
In storage at the end of the reporting year	<u>NA</u>
Of that quantity processed, report that quantity:	
In storage at the beginning of the reporting year	<u>147,000</u>
Processed as a reactant (chemical producer)	<u>NA</u>
Processed as a formulation component (mixture producer)	<u>NA</u>
Processed as an article component (article producer)	<u>2,961,000</u>
Repackaged (including export)	<u>NA</u>
In storage at the end of the reporting year	<u>294,000</u>

☐ Mark (X) this box if you attach a continuation sheet.

1.17 Mixture -- If the listed substance on which you are required to report is a mixture or a component of a mixture, provide the following information for each component chemical. (If the mixture composition is variable, report an average percentage of each component chemical for all formulations.)

[]

Component Name	Supplier Name	Average % Composition by Weight (specify precision, e.g., 45% \pm 0.5%)
NA		
Total		100%

10

2.04 State the quantity of the listed substance that your facility manufactured, imported, or processed during the 3 corporate fiscal years preceding the reporting year in descending order.

CBI

☐ Year ending [1][2] [8][7]
Mo. Year

Quantity manufactured NA kg

Quantity imported NA kg

Quantity processed 2,602,000 kg

Year ending [1][2] [8][6]
Mo. Year

Quantity manufactured NA kg

Quantity imported NA kg

Quantity processed 2,215,000 kg

Year ending [1][2] [8][5]
Mo. Year

Quantity manufactured NA kg

Quantity imported NA kg

Quantity processed 1,748,000 kg

2.05 Specify the manner in which you manufactured the listed substance. Circle all appropriate process types.

CBI

☐ Continuous process NA 1

Semicontinuous process 2

Batch process 3

☐ Mark (X) this box if you attach a continuation sheet.

2.06 Specify the manner in which you processed the listed substance. Circle all appropriate process types.

- ☐ Continuous process 1
- ☐ Semicontinuous process (2)
- ☐ Batch process (3)

2.07 State your facility's name-plate capacity for manufacturing or processing the listed substance. (If you are a batch manufacturer or batch processor, do not answer this question.)

- ☐ Manufacturing capacity NA kg/yr
- ☐ Processing capacity UK kg/yr

2.08 If you intend to increase or decrease the quantity of the listed substance manufactured, imported, or processed at any time after your current corporate fiscal year, estimate the increase or decrease based upon the reporting year's production volume.

<input type="checkbox"/>	Manufacturing Quantity (kg)	Importing Quantity (kg)	Processing Quantity (kg)
Amount of increase	<u>NA</u>	<u>NA</u>	<u>NA</u>
Amount of decrease	<u>NA</u>	<u>NA</u>	<u>NA</u>

☐ Mark (X) this box if you attach a continuation sheet.

2.09 For the three largest volume manufacturing or processing process types involving the listed substance, specify the number of days you manufactured or processed the listed substance during the reporting year. Also specify the average number of hours per day each process type was operated. (If only one or two operations are involved, list those.)

CBI

☐

	<u>Days/Year</u>	<u>Average Hours/Day</u>
--	------------------	------------------------------

Process Type #1 (The process type involving the largest quantity of the listed substance.)

Manufactured	<u>NA</u>	<u>NA</u>
Processed	<u>250</u>	<u>3</u>

Process Type #2 (The process type involving the 2nd largest quantity of the listed substance.)

Manufactured	<u>NA</u>	<u>NA</u>
Processed	<u>260</u>	<u>22</u>

Process Type #3 (The process type involving the 3rd largest quantity of the listed substance.)

Manufactured	<u>NA</u>	<u>NA</u>
Processed	<u>NA</u>	<u>NA</u>

2.10 State the maximum daily inventory and average monthly inventory of the listed substance that was stored on-site during the reporting year in the form of a bulk chemical.

CBI

☐

Maximum daily inventory	_____	kg
Average monthly inventory	_____	kg

☐ Mark (X) this box if you attach a continuation sheet.

- 2.11 Related Product Types -- List any byproducts, coproducts, or impurities present with the listed substance in concentrations greater than 0.1 percent as it is manufactured, imported, or processed. The source of byproducts, coproducts, or impurities means the source from which the byproducts, coproducts, or impurities are made or introduced into the product (e.g., carryover from raw material, reaction product, etc.).

CBI

☐

<u>CAS No.</u>	<u>Chemical Name</u>	<u>Byproduct, Coproduct or Impurity¹</u>	<u>Concentration (%) (specify \pm % precision)</u>	<u>Source of By-products, Coproducts, or Impurities</u>
<u>NA</u>				

¹Use the following codes to designate byproduct, coproduct, or impurity:

B = Byproduct
C = Coproduct
I = Impurity

☐ Mark (X) this box if you attach a continuation sheet.

2.12 Existing Product Types -- List all existing product types which you manufactured, imported, or processed using the listed substance during the reporting year. List the quantity of listed substance you use for each product type as a percentage of the total volume of listed substance used during the reporting year. Also list the quantity of listed substance used captively on-site as a percentage of the value listed under column b., and the types of end-users for each product type. (Refer to ☐ the instructions for further explanation and an example.)

CBI

☐

a. Product Types ¹	b. % of Quantity Manufactured, Imported, or Processed	c. % of Quantity Used Captively On-Site	d. Type of End-Users ²
B	100	100	I
K	100	100	I

¹Use the following codes to designate product types:

A = Solvent	L = Moldable/Castable/Rubber and additives
ⓑ = Synthetic reactant	M = Plasticizer
C = Catalyst/Initiator/Accelerator/ Sensitizer	N = Dye/Pigment/Colorant/Ink and additives
D = Inhibitor/Stabilizer/Scavenger/ Antioxidant	O = Photographic/Reprographic chemical and additives
E = Analytical reagent	P = Electrodeposition/Plating chemicals
F = Chelator/Coagulant/Sequestrant	Q = Fuel and fuel additives
G = Cleanser/Detergent/Degreaser	R = Explosive chemicals and additives
H = Lubricant/Friction modifier/Antiwear agent	S = Fragrance/Flavor chemicals
I = Surfactant/Emulsifier	T = Pollution control chemicals
J = Flame retardant	U = Functional fluids and additives
Ⓚ = Coating/Binder/Adhesive and additives	V = Metal alloy and additives
	W = Rheological modifier
	X = Other (specify) _____

²Use the following codes to designate the type of end-users:

I = Industrial	CS = Consumer
CM = Commercial	H = Other (specify) _____

☐ Mark (X) this box if you attach a continuation sheet.

- 2.13 Expected Product Types -- Identify all product types which you expect to manufacture, import, or process using the listed substance at any time after your current corporate fiscal year. For each use, specify the quantity you expect to manufacture, import, or process for each use as a percentage of the total volume of listed substance used during the reporting year. Also list the quantity of listed substance used captively on-site as a percentage of the value listed under column b., and the types of end-users for each product type. (Refer to the instructions for further explanation and an example.)

CBI

☐

a.	b.	c.	d.
Product Types ¹	% of Quantity Manufactured, Imported, or Processed	% of Quantity Used Captively On-Site	Type of End-Users ²
B	100	100	I
K	100	100	I

¹Use the following codes to designate product types:

- | | |
|--|---|
| A = Solvent | L = Moldable/Castable/Rubber and additives |
| <input checked="" type="radio"/> B = Synthetic reactant | M = Plasticizer |
| C = Catalyst/Initiator/Accelerator/
Sensitizer | N = Dye/Pigment/Colorant/Ink and additives |
| D = Inhibitor/Stabilizer/Scavenger/
Antioxidant | O = Photographic/Reprographic chemical
and additives |
| E = Analytical reagent | P = Electrodeposition/Plating chemicals |
| F = Chelator/Coagulant/Sequestrant | Q = Fuel and fuel additives |
| G = Cleanser/Detergent/Degreaser | R = Explosive chemicals and additives |
| H = Lubricant/Friction modifier/Antiwear
agent | S = Fragrance/Flavor chemicals |
| I = Surfactant/Emulsifier | T = Pollution control chemicals |
| J = Flame retardant | U = Functional fluids and additives |
| <input checked="" type="radio"/> K = Coating/Binder/Adhesive and additives | V = Metal alloy and additives |
| | W = Rheological modifier |

²Use the following codes to designate the type of end-users:

- | | |
|-----------------|---------------------------|
| I = Industrial | CS = Consumer |
| CM = Commercial | H = Other (specify) _____ |

☐ Mark (X) this box if you attach a continuation sheet.

2.14 Final Product -- Complete the following table for each type of final product manufactured, imported, or processed at your facility that contains the listed substance other than as an impurity.

☐

a.	b.	c.	d.
Product Type ¹	Final Product's Physical Form ²	Average % Composition of Listed Substance in Final Product	Type of End-Users ³
NA			

¹Use the following codes to designate product types:

A = Solvent	L = Moldable/Castable/Rubber and additives
B = Synthetic reactant	M = Plasticizer
C = Catalyst/Initiator/Accelerator/Sensitizer	N = Dye/Pigment/Colorant/Ink and additives
D = Inhibitor/Stabilizer/Scavenger/Antioxidant	O = Photographic/Reprographic chemical and additives
E = Analytical reagent	P = Electrodeposition/Plating chemicals
F = Chelator/Coagulant/Sequestrant	Q = Fuel and fuel additives
G = Cleanser/Detergent/Degreaser	R = Explosive chemicals and additives
H = Lubricant/Friction modifier/Antiwear agent	S = Fragrance/Flavor chemicals
I = Surfactant/Emulsifier	T = Pollution control chemicals
J = Flame retardant	U = Functional fluids and additives
K = Coating/Binder/Adhesive and additives	V = Metal alloy and additives
	W = Rheological modifier
	X = Other (specify) _____

²Use the following codes to designate the final product's physical form:

A = Gas	F2 = Crystalline solid
B = Liquid	F3 = Granules
C = Aqueous solution	F4 = Other solid
D = Paste	G = Gel
E = Slurry	H = Other (specify) _____
F1 = Powder	

³Use the following codes to designate the type of end-users:

I = Industrial	CS = Consumer
CM = Commercial	H = Other (specify) _____

☐ Mark (X) this box if you attach a continuation sheet.

2.15 Circle all applicable modes of transportation used to deliver bulk shipments of the
CBI listed substance to off-site customers.

☐ Truck 1
Railcar 2
Barge, Vessel 3
Pipeline 4
Plane 5
Other (specify) NA 6

2.16 Customer Use -- Estimate the quantity of the listed substance used by your customers
CBI or prepared by your customers during the reporting year for use under each category
of end use listed (i-iv).

☐

Category of End Use

i. Industrial Products

Chemical or mixture NA kg/yr

Article NA kg/yr

ii. Commercial Products

Chemical or mixture NA kg/yr

Article NA kg/yr

iii. Consumer Products

Chemical or mixture NA kg/yr

Article NA kg/yr

iv. Other

Distribution (excluding export) NA kg/yr

Export NA kg/yr

Quantity of substance consumed as reactant NA kg/yr

Unknown customer uses NA kg/yr

☐ Mark (X) this box if you attach a continuation sheet.

SECTION 3 PROCESSOR RAW MATERIAL IDENTIFICATION

PART A GENERAL DATA

- 3.01 Specify the quantity purchased and the average price paid for the listed substance for each major source of supply listed. Product trades are treated as purchases.
CBI The average price is the market value of the product that was traded for the listed substance.

☐

<u>Source of Supply</u>	<u>Quantity (kg)</u>	<u>Average Price (\$/kg)</u>
The listed substance was manufactured on-site.	NA	NA
The listed substance was transferred from a different company site.	NA	NA
The listed substance was purchased directly from a manufacturer or importer.	3,108,000	\$2.00
The listed substance was purchased from a distributor or repackager.	NA	NA
The listed substance was purchased from a mixture producer.	NA	NA

- 3.02 Circle all applicable modes of transportation used to deliver the listed substance to your facility.

☐

Truck	1
Railcar	2
Barge, Vessel	3
Pipeline	4
Plane	5
Other (specify) _____	6

☐ Mark (X) this box if you attach a continuation sheet.

3.03 a. Circle all applicable containers used to transport the listed substance to your
CBI facility.

☐

Bags 1
Boxes 2
Free standing tank cylinders 3
Tank rail cars ④
Hopper cars 5
Tank trucks ⑥
Hopper trucks 7
Drums 8
Pipeline 9
Other (specify) _____ 10

b. If the listed substance is transported in pressurized tank cylinders, tank rail cars, or tank trucks, state the pressure of the tanks.

Tank cylinders NA mmHg
Tank rail cars 760-7600 mmHg
Tank trucks 760-7600 mmHg

☐ Mark (X) this box if you attach a continuation sheet.

PART B RAW MATERIAL IN THE FORM OF A MIXTURE

3.04 If you obtain the listed substance in the form of a mixture, list the trade name(s) of the mixture, the name of its supplier(s) or manufacturer(s), an estimate of the average percent composition by weight of the listed substance in the mixture, and the amount of mixture processed during the reporting year.

CBI

☐

<u>Trade Name</u>	<u>Supplier or Manufacturer</u>	<u>Average % Composition by Weight (specify \pm % precision)</u>	<u>Amount Processed (kg/yr)</u>
<u>NA</u>			

☐ Mark (X) this box if you attach a continuation sheet.

PART C RAW MATERIAL VOLUME

3.05 State the quantity of the listed substance used as a raw material during the reporting year in the form of a class I chemical, class II chemical, or polymer, and the percent composition, by weight, of the listed substance.

☐

	Quantity Used (kg/yr)	% Composition by Weight of Listed Sub- stance in Raw Material (specify \pm % precision)
Class I chemical	2,961,000	99.9%
Class II chemical	NA	NA
Polymer	NA	NA

☐ Mark (X) this box if you attach a continuation sheet.

SECTION 4 PHYSICAL/CHEMICAL PROPERTIES

General Instructions:

If you are reporting on a mixture as defined in the glossary, reply to questions in Section 4 that are inappropriate to mixtures by stating "NA -- mixture."

For questions 4.06-4.15, if you possess any hazard warning statement, label, MSDS, or other notice that addresses the information requested, you may submit a copy or reasonable facsimile in lieu of answering those questions which it addresses.

PART A PHYSICAL/CHEMICAL DATA SUMMARY

- 4.01 Specify the percent purity for the three major¹ technical grade(s) of the listed substance as it is manufactured, imported, or processed. Measure the purity of the substance in the final product form for manufacturing activities, at the time you import the substance, or at the point you begin to process the substance.

☐ CBI

	<u>Manufacture</u>	<u>Import</u>	<u>Process</u>
Technical grade #1	<u>NA</u> % purity	<u>NA</u> % purity	<u>99.9</u> % purity
Technical grade #2	<u>NA</u> % purity	<u>NA</u> % purity	<u>NA</u> % purity
Technical grade #3	<u>NA</u> % purity	<u>NA</u> % purity	<u>NA</u> % purity

¹Major = Greatest quantity of listed substance manufactured, imported or processed.

- 4.02 Submit your most recently updated Material Safety Data Sheet (MSDS) for the listed substance, and for every formulation containing the listed substance. If you possess an MSDS that you developed and an MSDS developed by a different source, submit your version. Indicate whether at least one MSDS has been submitted by circling the appropriate response.

Yes (1)

No 2

Indicate whether the MSDS was developed by your company or by a different source.

Your company 1

Another source (2)

☐ Mark (X) this box if you attach a continuation sheet.

4.03 Submit a copy or reasonable facsimile of any hazard information (other than an MSDS) that is provided to your customers/users regarding the listed substance or any formulation containing the listed substance. Indicate whether this information has been submitted by circling the appropriate response.

Yes 1

No (2)

4.04 For each activity that uses the listed substance, circle all the applicable number(s) corresponding to each physical state of the listed substance during the activity listed. Physical states for importing and processing activities are determined at the time you import or begin to process the listed substance. Physical states for manufacturing, storage, disposal and transport activities are determined using the final state of the product.

CBI

[]

Activity	Physical State				
	Solid	Slurry	Liquid	Liquified Gas	Gas
Manufacture	1	2	3	4	5
Import	1	2	3	4	5
Process	1	2	(3)	4	5
Store	1	2	(3)	4	5
Dispose	1	2	3	4	5
Transport	1	2	3	4	5

[] Mark (X) this box if you attach a continuation sheet.

4.05 Particle Size -- If the listed substance exists in particulate form during any of the following activities, indicate for each applicable physical state the size and the percentage distribution of the listed substance by activity. Do not include particles ≥ 10 microns in diameter. Measure the physical state and particle sizes for importing and processing activities at the time you import or begin to process the listed substance. Measure the physical state and particle sizes for manufacturing storage, disposal and transport activities using the final state of the product.

CBI

☐

<u>Physical State</u>		<u>Manufacture</u>	<u>Import</u>	<u>Process</u>	<u>Store</u>	<u>Dispose</u>	<u>Transport</u>
Dust	<1 micron	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>

Aerosol	<1 micron	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>
	1 to <5 microns	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>
	5 to <10 microns	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>

☐ Mark (X) this box if you attach a continuation sheet.

SECTION 5 ENVIRONMENTAL FATE

PART A RATE CONSTANTS AND TRANSFORMATION PRODUCTS

5.01 Indicate the rate constants for the following transformation processes.

a. Photolysis:

Absorption spectrum coefficient (peak) UK (1/M cm) at _____ nm

Reaction quantum yield, ϕ UK at _____ nm

Direct photolysis rate constant, k_p , at ... UK 1/hr _____ latitude

b. Oxidation constants at 25°C:

For 1O_2 (singlet oxygen), k_{ox} UK 1/M hr

For RO_2 (peroxy radical), k_{ox} UK 1/M hr

c. Five-day biochemical oxygen demand, BOD_5 ... UK mg/l

d. Biotransformation rate constant:

For bacterial transformation in water, k_b ... UK 1/hr

Specify culture UK

e. Hydrolysis rate constants:

For base-promoted process, k_B UK 1/M hr

For acid-promoted process, k_A UK 1/M hr

For neutral process, k_N UK 1/hr

f. Chemical reduction rate (specify conditions) UK

g. Other (such as spontaneous degradation) ... UK

☐ Mark (X) this box if you attach a continuation sheet.

PART B PARTITION COEFFICIENTS

5.02 a. Specify the half-life of the listed substance in the following media.

<u>Media</u>	<u>Half-life (specify units)</u>
Groundwater	<u>Solidifies on Contact:</u> <u>Forms Non-Toxic Polyurea</u>
Atmosphere	<u>3 Hours</u> <u>Solidifies on Contact:</u>
Surface water	<u>Forms Non-Toxic Polyurea</u> <u>Solidifies on Contact:</u>
Soil	<u>Forms Non-Toxic Polyurea</u>

b. Identify the listed substance's known transformation products that have a half-life greater than 24 hours. ** See Attached Information*

<u>CAS No.</u>	<u>Name</u>	<u>Half-life (specify units)</u>	<u>Media</u>
<u>UK</u>			in
			in
			in
			in

5.03 Specify the octanol-water partition coefficient, K_{ow} ... UK at 25°C
Method of calculation or determination

5.04 Specify the soil-water partition coefficient, K_d UK at 25°C
Soil type

5.05 Specify the organic carbon-water partition coefficient, K_{oc} UK at 25°C

5.06 Specify the Henry's Law Constant, H UK atm-m³/mole

☐ Mark (X) this box if you attach a continuation sheet.

5.07 List the bioconcentration factor (BCF) of the listed substance, the species for which it was determined, and the type of test used in deriving the BCF.

<u>Bioconcentration Factor</u>	<u>Species</u>	<u>Test</u> ¹
<u>UK</u>		

¹Use the following codes to designate the type of test:

F = Flowthrough
S = Static

☐ Mark (X) this box if you attach a continuation sheet.

6.04 For each market listed below, state the quantity sold and the total sales value of the listed substance sold or transferred in bulk during the reporting year.

☐

<u>Market</u>	<u>Quantity Sold or Transferred (kg/yr)</u>	<u>Total Sales Value (\$/yr)</u>
Retail sales	_____	_____
Distribution -- Wholesalers	_____	_____
Distribution -- Retailers	_____	_____
Intra-company transfer	_____	_____
Repackagers	_____	_____
Mixture producers	_____	_____
Article producers	_____	_____
Other chemical manufacturers or processors	_____	_____
Exporters	_____	_____
Other (specify)	_____	_____
_____	_____	_____

6.05 Substitutes -- List all known commercially feasible substitutes that you know exist for the listed substance and state the cost of each substitute. A commercially feasible substitute is one which is economically and technologically feasible to use in your current operation, and which results in a final product with comparable performance in its end uses.

☐ Mark (X) this box if you attach a continuation sheet.

8.05 (continued)

¹Use the following codes to designate the type of hazardous waste:

I = Ignitable
C = Corrosive
R = Reactive
E = EP toxic
T = Toxic
H = Acutely hazardous

²Use the following codes to designate the physical state of the residual:

GC = Gas (condensable at ambient temperature and pressure)
GU = Gas (uncondensable at ambient temperature and pressure)
SO = Solid
SY = Sludge or slurry
AL = Aqueous liquid
OL = Organic liquid
IL = Immiscible liquid (specify phases, e.g., 90% water, 10% toluene)

8.05 continued below

☐ Mark (X) this box if you attach a continuation sheet.

8.05 (continued)

³For each additive package introduced into a process stream, specify the compounds that are present in each additive package, and the concentration of each component. Assign an additive package number to each additive package and list this number in column d. (Refer to the instructions for further explanation and an example. Refer to the glossary for the definition of additive package.)

Additive Package Number	Components of Additive Package	Concentrations (% or ppm)
<u>1</u>	<u>NA</u>	<u>NA</u>
<u>2</u>		
<u>3</u>		
<u>4</u>		
<u>5</u>		

⁴Use the following codes to designate how the concentration was determined:

A = Analytical result

E = Engineering judgement/calculation

8.05 continued below

☐ Mark (X) this box if you attach a continuation sheet.

8.05 (continued)

⁵Use the following codes to designate how the concentration was measured:

V = Volume

W = Weight

⁶Specify the analytical test methods used and their detection limits in the table below. Assign a code to each test method used and list those codes in column e.

<u>Code</u>	<u>Method</u>	<u>Detection Limit</u> <u>(± ug/l)</u>
<u>1</u>	<u>NA</u>	<u></u>
<u>2</u>	<u></u>	<u></u>
<u>3</u>	<u></u>	<u></u>
<u>4</u>	<u></u>	<u></u>
<u>5</u>	<u></u>	<u></u>
<u>6</u>	<u></u>	<u></u>

☐ Mark (X) this box if you attach a continuation sheet.

CBI

9.21 Do you have a written medical action plan for responding to routine or emergency exposure to the listed substance?

Routine exposure

Yes ①

No 2

Emergency exposure

Yes ①

No 2

If yes, where are copies of the plan maintained?

Routine exposure: Main Office, Foaming Office, Safety Office, Rebond,
Fire Pump Room

Emergency exposure: Same as Above

9.22 Do you have a written leak and spill cleanup plan that addresses the listed substance? Circle the appropriate response.

Yes ①

No 2

If yes, where are copies of the plan maintained? Main Office, Foam Dept. Rebond
Dept. Safety Office, Local & State
Agencies & Fire Department.

Has this plan been coordinated with state or local government response organizations?
Circle the appropriate response.

Yes ①

No 2

9.23 Who is responsible for monitoring worker safety at your facility? Circle the appropriate response.

Plant safety specialist 1

Insurance carrier 2

OSHA consultant 3

Other (specify) Plant Supervisor, Safety Director 4

☐ Mark (X) this box if you attach a continuation sheet.

SECTION 10 ENVIRONMENTAL RELEASE

General Instructions:

Complete Part E (questions 10.23-10.35) for each non-routine release involving the listed substance that occurred during the reporting year. Report on all releases that are equal to or greater than the listed substance's reportable quantity value, RQ, unless the release is federally permitted as defined in 42 U.S.C. 9601, or is specifically excluded under the definition of release as defined in 40 CFR 302.3(22). Reportable quantities are codified in 40 CFR Part 302. If the listed substance is not a hazardous substance under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) and, thus, does not have an RQ, then report releases that exceed 2,270 kg. If such a substance however, is designated as a CERCLA hazardous substance, then report those releases that are equal to or greater than the RQ. The facility may have answered these questions or similar questions under the Agency's Accidental Release Information Program and may already have this information readily available. Assign a number to each release and use this number throughout this part to identify the release. Releases over more than a 24-hour period are not single releases, i.e., the release of a chemical substance equal to or greater than an RQ must be reported as a separate release for each 24-hour period the release exceeds the RQ.

For questions 10.25-10.35, answer the questions for each release identified in question 10.23. Photocopy these questions and complete them separately for each release.

PART A GENERAL INFORMATION

10.01 Where is your facility located? Circle all appropriate responses.

CBI

- ☐ Industrial area ①
- Urban area 2
- Residential area ③
- Agricultural area 4
- Rural area 5
- Adjacent to a park or a recreational area 6
- Within 1 mile of a navigable waterway 7
- Within 1 mile of a school, university, hospital, or nursing home facility ⑧
- Within 1 mile of a non-navigable waterway 9
- Other (specify) _____ 10

☐ Mark (X) this box if you attach a continuation sheet.

10.02 Specify the exact location of your facility (from central point where process unit is located) in terms of latitude and longitude or Universal Transverse Mercader (UTM) coordinates.

Latitude 41 ° 45 ' 22 "

Longitude 87 ° 48 ' 44 "

UTM coordinates UK Zone _____, Northing _____, Easting _____

10.03 If you monitor meteorological conditions in the vicinity of your facility, provide the following information.

Average annual precipitation _____ inches/year

Predominant wind direction _____

10.04 Indicate the depth to groundwater below your facility.

Depth to groundwater _____ meters

10.05 For each on-site activity listed, indicate (Y/N/NA) all routine releases of the listed substance to the environment. (Refer to the instructions for a definition of CBI Y, N, and NA.)

0 = Other (specify) _____

☐ Mark (X) this box if you attach a continuation sheet.

10.16 Raw Material, Intermediate and Product Storage Emissions - - Complete the following table by providing the information on each liquid raw material, intermediate, and product storage vessel containing the listed substance as identified in your process block or residual treatment block flow diagram(s).

CBI

☐

Vessel Type ¹	Floating Roof ² Seals	Composition of Stored Materials ³	Throughput (liters per year)	Vessel Filling Rate (gpm)	Vessel Filling Duration (min)	Vessel Inner Diameter (m)	Vessel Height (m)	Operating Vessel Volume (l)	Vessel Emission Controls ⁴	Design Flow Rate ⁵	Vent Diameter (cm)	Control Efficiency (%)	Basis for Estimate ⁶
H	NA	100%	UK	60	240	3.16	320	105,980	NA	NA	7.6	NA	NA
H	NA	100%	UK	60	240	3.16	320	105,980	NA	NA	7.6	NA	NA

¹Use the following codes to designate vessel type:

F = Fixed roof
 CIF = Contact internal floating roof
 NCIF = Noncontact internal floating roof
 EFR = External floating roof
 P = Pressure vessel (indicate pressure rating)
 H = Horizontal
 U = Underground

²Use the following codes to designate floating roof seals:

MS1 = Mechanical shoe, primary
 MS2 = Shoe-mounted secondary
 MS2R = Rim-mounted, secondary
 LM1 = Liquid-mounted resilient filled seal, primary
 LM2 = Rim-mounted shield
 LMW = Weather shield
 VM1 = Vapor mounted resilient filled seal, primary
 VM2 = Rim-mounted secondary
 VMW = Weather shield

³Indicate weight percent of the listed substance. Include the total volatile organic content in parenthesis

⁴Other than floating roofs

⁵Gas/vapor flow rate the emission control device was designed to handle (specify flow rate units)

⁶Use the following codes to designate basis for estimate of control efficiency:

C = Calculations
 S = Sampling

PART E NON-ROUTINE RELEASES

10.23 Indicate the date and time when the release occurred and when the release ceased or was stopped. If there were more than six releases, attach a continuation sheet and list all releases.

<u>Release</u>	<u>Date Started</u>	<u>Time (am/pm)</u>	<u>Date Stopped</u>	<u>Time (am/pm)</u>
<u>1</u>	<u>NA</u>	<u> </u>	<u> </u>	<u> </u>

SECTION V - HEALTH DATA**TOXICOLOGICAL TEST DATA:**

LUPRANATE* T80-Type 4

2,4 Toluene Diisocyanate

Rat, Oral LD50

Mouse, Inhalation LC50

RESULT:Severe eye and skin
irritant, sensitizer

5.8 g/kg.

10 ppm/4H

EFFECTS OF OVEREXPOSURE:

The primary routes of exposure to this material are eye or skin contact, and inhalation.

Inhalation of the vapors causes severe irritation to lungs, and pulmonary edema can occur after a serious vapor exposure. Liquid contact causes serious skin and eye burns. Pulmonary sensitization can occur in some individuals leading to asthma-type spasms of the bronchial tubes and difficulty in breathing. Preclude from exposure those individuals having a history of respiratory illness, asthmatic conditions, eye damage or TDI sensitization. Recent studies indicate that overexposure may be associated with chronic lung impairment. In a National Toxicology Program (NTP) study, TDI was carcinogenic when given orally to rats and mice at maximum tolerated doses. TDI was not carcinogenic to rats in a two-year inhalation study. Based on the results of the oral study, TDI was included in the NTP Annual Report on Carcinogens:

FIRST AID PROCEDURES:

Existing medical conditions aggravated by exposure to this material:
Pulmonary disorders.

Eyes-Immediately wash eyes with running water for 15 minutes.
Get immediate medical attention.

Skin-Wash affected areas with water while removing contaminated clothing. Get immediate medical attention. Launder contaminated clothing before reuse.

Ingestion-If swallowed, DO NOT INDUCE VOMITING. Dilute with water or milk and get immediate medical attention. Never give fluids or induce vomiting if the victim is unconscious or having convulsions.

Inhalation-Move to fresh air. Aid in breathing, if necessary, and get immediate medical attention.

SECTION VI - REACTIVITY DATA**STABILITY:** Stable.**CONDITIONS TO AVOID:** Avoid temperatures >40°C for extended periods of time.**CHEMICAL INCOMPATIBILITY:** Basic compounds, caustic soda, tertiaryamines, water**HAZARDOUS DECOMPOSITION PRODUCTS:** TDI vapors, NOx, CO and HCN.**HAZARDOUS POLYMERIZATION:** May occur. Avoid contamination with moisture and other products that react with isocyanates.**CONDITIONS TO AVOID:****CORROSIVE TO METAL:** No**OXIDIZER:** No**SECTION VII - SPECIAL PROTECTION****RESPIRATORY PROTECTION:**

Approved respirator for transferring operations or escape.
Self-contained breathing apparatus if the P.E.L. is exceeded, or in confined areas or if a leak occurs.

EYE PROTECTION: Wear fitted goggles or face shield and safety glasses.**PROTECTIVE CLOTHING:** Rubber gloves, coveralls, boots and rubber apron which must be cleaned after each use.**VENTILATION:** Use local exhaust wherever vapors are generated.**OTHER:** Maintain work area below P.E.L.

SECTION VIII - ENVIRONMENTAL DATA**ENVIRONMENTAL TOXICITY DATA:**

Aquatic toxicity rating: TLm 98: 10 ppm-1 ppm.

SPILL AND LEAK PROCEDURES:

LUPRANATE* T80 is a RCRA-regulated product. Wear protective clothing, evacuate all not involved in the cleanup. For minor spills, absorb with absorbent and containerize into open top drums. Decontaminate spill area with a mixture of 90% water, 8% concentrated ammonia and 2% detergent. Dispose of

HAZARDOUS SUBSTANCE SUPERFUND: Yes RQ (lbs): 100

WASTE DISPOSAL METHOD:

waste in a RCRA-permitted facility.
Incinerate in a RCRA licensed facility. Do not discharge into waterways or sewer systems without proper authority.

HAZARDOUS WASTE 40CFR261: Yes

HAZARDOUS WASTE NUMBER: U 223

CONTAINER DISPOSAL:

Containers should be neutralized with liquid decontaminant. Empty containers, containing less than 1" of residue, may be landfilled. If containers are not empty, they must be disposed as a hazardous waste in a RCRA-licensed facility.

WHILE BASF CORPORATION BELIEVES THE DATA SET FORTH HEREIN ARE ACCURATE AS OF THE DATE HEREOF, BASF CORPORATION MAKES NO WARRANTY WITH RESPECT THERETO AND EXPRESSLY DISCLAIMS ALL LIABILITY FOR RELIANCE THEREON. SUCH DATA ARE OFFERED SOLELY FOR YOUR CONSIDERATION, INVESTIGATION, AND VERIFICATION.

SECTION X - PRODUCT LABEL**LUPRANATE* T80-Type 4****DANGER: POISON****HARMFUL IF INHALED.**

CONTACT WITH EYES AND SKIN RESULTS IN SERIOUS BURNS. INHALATION OF VAPORS CAUSES SEVERE IRRITATION TO LUNGS. PULMONARY EDEMA MAY OCCUR. PULMONARY SENSITIZATION CAN OCCUR IN SOME INDIVIDUALS, LEADING TO ASTHMA-TYPE SPASMS OF THE BRONCHIAL TUBES AND DIFFICULTY IN BREATHING. INDIVIDUALS WITH A HISTORY OF RESPIRATORY ILLNESS, ASTHMATIC CONDITIONS, EYE DAMAGE OR TDI SENSITIZATION SHOULD NOT BE EXPOSED TO THIS PRODUCT.

IN AN NTP STUDY, TDI WAS CARCINOGENIC TO RODENTS GIVEN HIGH ORAL DOSES AND IS INCLUDED IN THE NTP ANNUAL REPORT ON CARCINOGENS. TDI WAS NOT CARCINOGENIC TO RATS IN A TWO-YEAR INHALATION STUDY.

Use with local exhaust. Wear an approved respirator or self-contained breathing apparatus, fitted goggles or face shield and safety glasses, rubber gloves, coveralls, boots, apron and other protective clothing as necessary to prevent contact.

FIRST AID:

Eyes-Immediately wash eyes with running water for 15 minutes.

Get immediate medical attention.

Skin-Wash affected areas with water while removing contaminated clothing. Get immediate medical attention. Launder contaminated clothing before reuse.

Ingestion-If swallowed, DO NOT INDUCE VOMITING. Dilute with water or milk and get immediate medical attention. Never give fluids or induce vomiting if the victim is unconscious or having convulsions.

Inhalation-Move to fresh air. Aid in breathing, if necessary, and get immediate medical attention.

HANDLING AND STORAGE: Keep containers closed and store in a well-ventilated place. Outage of container should be filled with dry inert gas at atmospheric pressure to avoid reaction with moisture. Contamination by moisture or basic compounds can cause dangerous pressure buildup in closed container. Store above 60 F to prevent freezing and isomer separation. If solidified, do not exceed 95 F while thawing to prevent discoloration. Mix before using.

IN CASE OF SPILLS OR LEAKS: Material is a RCRA-regulated product. Spills should be contained, absorbed and placed in suitable containers for disposal in a RCRA-licensed facility.

IN CASE OF FIRE: Use water fog, foam or CO2 extinguishing media. Firefighters should be equipped with self-contained breathing apparatus and turnout gear for protection against TDI vapors and toxic decomposition products.

EMPTY CONTAINERS: All labeled precautions must be observed when handling, storing and transporting empty containers due to product residues. Do not reuse this container unless it is professionally cleaned and reconditioned.

DISPOSAL: Spilled material, unused contents and empty containers must be disposed of in accordance with local, state and federal regulations. Refer to our Material Safety Data Sheet for specific disposal instructions.

IN CASE OF CHEMICAL EMERGENCY: Call CHEMTREC day or night for assistance and information concerning spilled material, fire, exposure and other chemical accidents 800-424-9300.

ATTENTION: This product is sold solely for use by industrial institutions. Refer to our Technical Bulletin and Material Safety Data Sheet regarding safety, usage, applications, hazards, procedures and disposal of this product. Consult your supervisor for additional information.

FOR INDUSTRY USE ONLY.

*For Section 302 and 313 SARA information refer to Page 6, Section IX, SARA.

III. PHYSICAL DATA

APPEARANCE.....: Liquid
COLOR.....: Water white to pale yellow
ODOR.....: Sharp, pungent
ODOR THRESHOLD.....: Greater than TLV of 0.005 ppm
MOLECULAR WEIGHT.....: 174
MELT POINT/FREEZE POINT....: Approx. 55°F (13°C) for TDI
BOILING POINT.....: Approx. 484°F (251°C) for TDI
VAPOR PRESSURE.....: Approx. 0.025 mmHg @ 77°F (25°C) for TDI
VAPOR DENSITY (AIR=1).....: 6.0 for TDI
pH.....: Not Applicable
SPECIFIC GRAVITY.....: 1.22 @ 77°F (25°C)
BULK DENSITY.....: 10.18 lbs/gal
SOLUBILITY IN WATER.....: Not Soluble. Reacts slowly with water at normal
room temperature to liberate CO₂ gas.
% VOLATILE BY VOLUME.....: Negligible

Product Code: E-002
Page 1 of 8

IV. FIRE & EXPLOSION DATA

FLASH POINT °F(°C).....: 260°F (127°C) Pensky-Martens Closed Cup
FLAMMABLE LIMITS -

Le1.....: 0.9%

Uel.....: 9.5%

EXTINGUISHING MEDIA.....: Dry chemical (e.g. monoammonium phosphate, potassium sulfate, and potassium chloride), carbon dioxide, high expansion (proteinic) chemical foam, water spray for large fires. Caution: Reaction between water or foam and hot TDI can be vigorous.

SPECIAL FIRE FIGHTING PROCEDURES/UNUSUAL FIRE OR EXPLOSION HAZARDS:

Full emergency equipment with self-contained breathing apparatus and full protective clothing (such as rubber gloves, boots, bands around legs, arms and waist) should be worn by fire fighters. No skin surface should be exposed. During a fire, TDI vapors and other irritating, highly toxic gases may be generated by thermal decomposition or combustion. (See Section VIII). At temperatures greater than 350°F (177°C) TDI forms carbodiimides with the release of CO₂, which can cause pressure build-up in closed containers. Explosive rupture is possible. Therefore, use cold water to cool fire-exposed containers.

V. HUMAN HEALTH DATA

PRIMARY ROUTE(S) OF

ENTRY.....: Inhalation. Skin contact from liquid, vapors or aerosols.

EFFECTS AND SYMPTOMS OF OVEREXPOSURE

INHALATION

Acute Exposure. TDI vapors or mist at concentrations above the TLV can irritate (burning sensation) the mucous membranes in the respiratory tract (nose, throat, lungs) causing runny nose, sore throat, coughing, chest discomfort, shortness of breath and reduced lung function (breathing obstruction). Persons with a preexisting, nonspecific bronchial hyperreactivity can respond to concentrations below the TLV with similar symptoms as well as asthma attack. Exposure well above the TLV may lead to bronchitis, bronchial spasm and pulmonary edema (fluid in lungs). These effects are usually reversible. Chemical or hypersensitive pneumonitis, with flu-like symptoms (e.g., fever, chills), has also been reported. These symptoms can be delayed up to several hours after exposure.

Chronic Exposure. As a result of previous repeated overexposures or a single large dose, certain individuals may develop isocyanate sensitization (chemical asthma) which will cause them to react to a later exposure to isocyanate at levels well below the TLV. These symptoms, which can include chest tightness, wheezing, cough, shortness of breath or asthmatic attack, could be immediate or delayed up to several hours after exposure. Similar to many non-specific asthmatic responses, there are reports that once sensitized an individual can experience these symptoms upon exposure to dust, cold air or other irritants. This increased lung sensitivity can persist for weeks and in severe cases for several years. Chronic overexposure to isocyanate has also been reported to cause lung damage (including decrease in lung function) which may be permanent. Sensitization can either be temporary or permanent.

V. HUMAN HEALTH DATA (Continued)

SKIN CONTACT

Acute Exposure. Isocyanates react with skin protein and moisture and can cause irritation which may include the following symptoms: reddening, swelling, rash, scaling or blistering. Cured material is difficult to remove.

Chronic Exposure. Prolonged contact can cause reddening, swelling, rash, scaling, blistering, and, in some cases, skin sensitization. Individuals who have developed a skin sensitization can develop these symptoms as a result of contact with very small amounts of liquid material or as a result of exposure to vapor.

EYE CONTACT

Acute Exposure. Liquid, aerosols or vapors are severely irritating and can cause pain, tearing, reddening and swelling. If left untreated, corneal damage can occur and injury is slow to heal. However, damage is usually reversible. See Section VI for treatment.

Chronic Exposure. Prolonged vapor contact may cause conjunctivitis.

INGESTION

Acute Exposure. Can result in irritation and corrosive action in the mouth, stomach tissue and digestive tract. Symptoms can include sore throat, abdominal pain, nausea, vomiting and diarrhea.

Chronic Exposure. None Found

MEDICAL CONDITIONS

AGGRAVATED BY EXPOSURE...: Asthma, other respiratory disorders (bronchitis, emphysema, bronchial hyperreactivity), skin allergies, eczema.

CARCINOGENICITY.....: No carcinogenic activity was observed in lifetime inhalation studies in rats and mice (International Isocyanate Institute).

NTP.....: The National Toxicology Program reported that TDI caused an increase in the number of tumors in exposed rats over those counted in non-exposed rats. The TDI was administered in corn-oil and introduced into the stomach through a tube. Based on this study, the NTP has listed TDI as a substance that may reasonably be anticipated to be a carcinogen in its Fourth Annual Report on Carcinogens.

IARC.....: IARC has announced that it will list TDI as a substance for which there is sufficient evidence for its carcinogenicity in experimental animals but inadequate evidence for the carcinogenicity of TDI to humans (IARC Monograph 39).

OSHA.....: Not listed.

EXPOSURE LIMITS

OSHA PEL.....: 0.02 ppm STEL/0.005 ppm 8HR TWA for 2,4'-TDI

ACGIH TLV.....: 0.005 ppm TWA/0.02 ppm STEL

VI. EMERGENCY & FIRST AID PROCEDURES

EYE CONTACT.....: Flush with copious amounts of water, preferably lukewarm for at least 15 minutes holding eyelids open all the time. Refer individual to physician or an ophthalmologist for immediate follow-up.

VI. EMERGENCY & FIRST AID PROCEDURE (Continued)

SKIN CONTACT.....: Remove contaminated clothing immediately. Wash affected areas thoroughly with soap and water for at least 15 minutes. Tincture of green soap and water is also effective in removing isocyanates. Wash contaminated clothing thoroughly before reuse. For severe exposures, get under safety shower after removing clothing, then get medical attention. For lesser exposures, seek medical attention if irritation develops or persists after the area is washed.

INHALATION.....: Move to an area free from risk of further exposure. Administer oxygen or artificial respiration as needed. Obtain medical attention. Asthmatic-type symptoms may develop and may be immediate or delayed up to several hours. Consult physician.

INGESTION.....: Do not induce vomiting. Give 1 to 2 cups of milk or water to drink. DO NOT GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON. Consult physician.

NOTE TO PHYSICIAN.....: Eyes. Stain for evidence of corneal injury. If cornea is burned, instill antibiotic steroid preparation frequently. Workplace vapors have produced reversible corneal epithelial edema impairing vision. Skin. This compound is a known skin sensitizer. Treat symptomatically as for contact dermatitis or thermal burns. Ingestion. Treat symptomatically. There is no specific antidote. Inducing vomiting is contraindicated because of the irritating nature of this compound. Respiratory. This compound is a known pulmonary sensitizer. Treatment is essentially symptomatic. An individual having a skin or pulmonary sensitization reaction to this material should be removed from exposure to any isocyanate.

VII. EMPLOYEE PROTECTION RECOMMENDATIONS

EYE PROTECTION.....: Liquid chemical goggles or full-face shield. Contact lenses should not be worn. If vapor exposure is causing irritation, use a full-face, air-supplied respirator.

SKIN PROTECTION.....: Chemical resistant gloves (butyl rubber, nitrile rubber, polyvinyl alcohol). However, please note that PVA degrades in water. Cover as much of the exposed skin area as possible with appropriate clothing. If skin creams are used, keep the area covered only by the cream to a minimum.

RESPIRATORY PROTECTION.....: An approved positive pressure air-supplied respirator is required whenever TDI concentrations are not known or exceed the Short-Term Exposure or Ceiling Limit of 0.02 ppm or exceed the 8-hour Time Weighted Average TLV of 0.005 ppm. An approved air-supplied respirator with full facepiece must also be worn during spray application, even if exhaust ventilation is used. For emergency and other conditions where the exposure limits may be greatly exceeded, use an approved, positive pressure self-contained breathing apparatus. TDI has poor warning properties since the odor at which TDI can be smelled is substantially higher than 0.02 ppm. Observe OSHA regulations for respirator use (29 CFR 1910.134).

VII. EMPLOYEE PROTECTION RECOMMENDATIONS (Continued)

VENTILATION.....: Local exhaust should be used to maintain levels below the TLV whenever TDI is handled, processed, or spray-applied. At normal room temperatures (70°F) TDI levels quickly exceed the TLV unless properly ventilated. Standard reference sources regarding industrial ventilation (e.g., ACGIH Industrial Ventilation) should be consulted for guidance about adequate ventilation.

MONITORING.....: TDI exposure levels must be monitored by accepted monitoring techniques to ensure that the TLV is not exceeded. (Contact Mobay for guidance). See Volume 1 (Chapter 17) and Volume 3 (Chapter 3) in Patty's Industrial Hygiene and Toxicology for sampling strategy.

MEDICAL SURVEILLANCE.....: Medical supervision of all employees who handle or come in contact with TDI is recommended. These should include preemployment and periodic medical examinations with respiratory function tests (FEV, FVC as a minimum). Persons with asthmatic-type conditions, chronic bronchitis, other chronic respiratory diseases or recurrent skin eczema or sensitization should be excluded from working with TDI. Once a person is diagnosed as sensitized to TDI, no further exposure can be permitted.

OTHER.....: Safety showers and eyewash stations should be available. Educate and train employees in safe use of product. Follow all label instructions.

VIII. REACTIVITY DATA

STABILITY.....: Stable under normal conditions.

POLYMERIZATION.....: May occur if in contact with moisture or other materials which react with isocyanates. Self-reaction may occur at temperatures over 350°F (177°C) or at lower temperatures if sufficient time is involved. See Section IV.

INCOMPATIBILITY

(MATERIALS TO AVOID).....: Water, amines, strong bases, alcohols. Will cause some corrosion to copper alloys and aluminum. Reacts with water to form heat, CO₂, and insoluble ureas.

HAZARDOUS DECOMPOSITION

PRODUCTS.....: By high heat and fire: carbon monoxide, oxides of nitrogen, traces of HCN, TDI vapors and mist.

IX. SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED: Evacuate and ventilate spill area; dike spill to prevent entry into water system; wear full protective equipment, including respiratory equipment during clean-up. (See Section VII).

Major Spill: Call Mobay at 412/923-1800. If transportation spill, call CHEMTREC 800/424-9300. If temporary control of isocyanate vapor is required, a blanket of protein foam (available at most fire departments) may be placed over the spill. Large quantities may be pumped into closed, but not sealed, container for disposal.

IX. SPILL OR LEAK PROCEDURES (Continued)

Minor Spill: Absorb isocyanate with sawdust or other absorbent, shovel into suitable unsealed containers, transport to well-ventilated area (outside) and treat with neutralizing solution: mixture of water (80%) with non-ionic surfactant Tergitol TMN-10 (20%), or; water (90%), concentrated ammonia (3-8%) and detergent (2%). Add about 10 parts of neutralizer per part of isocyanate, with mixing. Allow to stand uncovered for 48 hours to let CO₂ escape.

Clean-up: Decontaminate floor with decontamination solution letting stand for at least 15 minutes.

CERCLA (SUPERFUND) REPORTABLE QUANTITY: 100 pounds for TDI

WASTE DISPOSAL METHOD.....: Follow all federal, state or local regulations. TDI must be disposed of in a permitted incinerator or landfill. Incineration is the preferred method for liquids. Solids are usually incinerated or landfilled. Empty containers must be handled with care due to product residue. Decontaminate containers prior to disposal. Empty decontaminated containers should be crushed to prevent reuse. **DO NOT HEAT OR CUT EMPTY CONTAINER WITH ELECTRIC OR GAS TORCH.** (See Sections IV and VIII). Vapors and gases may be highly toxic.

RCRA STATUS.....: TDI is listed as a hazardous waste (No. U-223) under Title 40 Code of Federal Regulations, Section 261.33 (f). The residue from decontaminating a TDI spill is also classified as a hazardous waste under Section 261.3 (c)(2) or RCRA.

SUPERFUND AMENDMENTS AND REAUTHORIZATION ACT (SARA), TITLE III:

Section 302 - Extremely Hazardous Substances: 2,4-Toluene Diisocyanate (TDI)
CAS# 584-84-9 = 80%
2,6-Toluene Diisocyanate (TDI)
CAS# 91-08-7 = 20%

Section 313 - Toxic Chemicals: 2,4-Toluene Diisocyanate (TDI)
CAS# 584-84-9 = 80%
2,6-Toluene Diisocyanate (TDI)
CAS# 91-08-7 = 20%

X. SPECIAL PRECAUTIONS & STORAGE DATA

STORAGE TEMPERATURE

(MIN./MAX.).....: 70°F (21°C)/90°F (32°C)

AVERAGE SHELF LIFE.....: 12 months

SPECIAL SENSITIVITY

(HEAT, LIGHT, MOISTURE): If container is exposed to high heat, 375°F (177°C) it can be pressurized and possibly rupture. TDI reacts slowly with water to form polyureas and liberates CO₂ gas. This gas can cause sealed containers to expand and possibly rupture.

PRECAUTIONS TO BE TAKEN

IN HANDLING AND STORING.: Store in tightly closed containers to prevent moisture contamination. Do not reseal if contamination is suspected. Prevent all contact. Do not breathe the vapors. Warning properties (irritation of the eyes, nose and throat or odor) are not adequate to prevent chronic overexposure from inhalation. This material can produce asthmatic sensitization upon either single inhalation exposure to a relatively high concentration or upon repeated inhalation exposures to lower concentrations. Exposure to vapors of heated TDI can be extremely dangerous. Employee education and training in safe handling of this product are required under the OSHA Hazard Communication Standard.

XI. SHIPPING DATA

D.O.T. SHIPPING NAME.....: Toluene Diisocyanate
TECHNICAL SHIPPING NAME....: Toluene Diisocyanate (TDI)
D.O.T. HAZARD CLASS.....: Poison B
UN/NA NO.....: UN 2078
PRODUCT RQ.....: 100 pounds
D.O.T. LABELS.....: Poison
D.O.T. PLACARDS.....: Poison
FRT. CLASS BULK.....: Toluene Diisocyanate
FRT. CLASS PKG.....: Chemicals, NOI (Toluene Diisocyanate) NMFC 60000
PRODUCT LABEL.....: Mondur TD-80 Product Label

XII. ANIMAL TOXICITY DATA

ACUTE TOXICITY

ORAL, LD50.....: Range of 4130-6170 mg/kg (Rats and Mice)
DERMAL, LD50.....: Greater than 10,000 mg/kg (Rabbits)
INHALATION, LC50.(4 hr):. Range of 16-50 ppm (Rat), 10 ppm (Mouse),
11 ppm (Rabbit), 13 ppm (Guinea Pig).
EYE EFFECTS.....: Severe eye irritant capable of inducing corneal
opacity.

SKIN EFFECTS.....: Moderate skin irritant. Primary dermal
irritation score: 4.12/8.0 (Draize). However, repeated or prolonged
contact may culminate in severe skin irritation and/or corrosion.

SENSITIZATION.....: Skin sensitizer in guinea pigs. One study
using guinea pigs reported that repeated skin contact with TDI caused
respiratory sensitization. Although poorly defined in experimental animal
models, TDI is known to be a pulmonary sensitizer in humans. In addition,
there is some evidence that cross-sensitization between different types of
diisocyanates may occur.

SUB-CHRONIC/CHRONIC TOXICITY: Sub-chronic and chronic animal studies show
that the primary effects of inhaling vapors and/or aerosols of TDI are
restricted to the pulmonary systems. Emphysema, pulmonary edema, pneumonitis
and rhinitis are common pathologic effects. Extended exposures to as low as
0.1 ppm TDI have induces pulmonary inflammation.

OTHER

CARCINOGENICITY.....: The NTP conducted carcinogenesis studies of a
commercial grade TDI using rats and mice in which the test material was
diluted in corn oil and administered by gavage. The investigators concluded
that TDI was carcinogenic in male and female rats (fibrosarcomas, pancreatic
adenomas, neoplastic liver nodules and mammary gland fibrosarcomas) and
female mice (hemangiosarcomas and hepatocellular adenomas). However,
chronic inhalation studies in which rats and mice were exposed to 0.05 and
0.15 ppm TDI (10-30 times recommended TLV, 8-hr level) induced no
treatment-related tumorigenic effects. In these studies, both exposure
levels produced extensive irritation to the nasal passages and upper
respiratory system of the test animals indicating that suitable effective
exposures were administered.

XII. ANIMAL TOXICITY DATA (Continued)

MUTAGENICITY.....: TDI is positive in the Ames assay with activation. However, mammalian cell transformation assays using human lung cells and Syrian hamster kidney cells were negative, as were micronucleus tests using rats and mice.

TERATOGENICITY.....: Rats were exposed to an 80:20 mixture of 2,4- and 2,6- toluene diisocyanate vapor at analytical concentrations of 0.021, 0.12 and 0.48 ppm. Minimal fetotoxicity was observed at a maternally toxic concentrations of 0.48 ppm. The NOEL for maternal and developmental toxicity was 0.12 ppm. No embryotoxicity or teratogenicity was observed.

AQUATIC TOXICITY.....: LC₅₀ - 96 hr (static): 165 mg/liter (Fathead minnow)
LC₅₀ - 96 hr (static): Greater than 508 mg/liter (Grass shrimp)
LC₅₀ - 24 hr (static): Greater than 500 mg/liter (Daphnia magna)

XIII. APPROVALS

REASON FOR ISSUE.....: Revising TLV in Sections II and V
PREPARED BY.....: G. L. Copeland

Fate of TDI and MDI in Air, Soil, and Water

D. S. GILBERT*

*International Isocyanate Institute, Inc.
119 Cherry Hill Road
Parsippany, New Jersey 07054
USA*

ABSTRACT

Toluene diisocyanate (TDI) and methylene diphenylene diisocyanate (MDI) are used in the production of polyurethanes. They can cause respiratory problems at very low concentrations, and workplace and emission levels have been subject to rigorous controls for many years. As a result of these controls, and the very low vapour pressures of the products and their variants, environmental pollution due to emissions or spillages is very low.

III has sponsored a range of studies to determine the fate of TDI and MDI in air, soil and water. Studies of simulated atmospheric conditions indicate that TDI is destroyed predominantly by OH radicals, without the formation of toluene diamine (TDA). TDA or MDA (methylene dianiline), if generated in the atmosphere from any source, are also destroyed by OH radical attack, and no accumulation of these products is expected.

In soil and water TDI and MDI are converted to polyureas, which are chemically inert, and which appear to cause no toxicological effects. The initial rate of reaction of TDI and MDI with water is relatively fast, but in many conditions the resulting polyurea products encapsulate agglomerations of the diisocyanates and rates of reactions decrease rapidly. Under aquatic conditions TDA and MDA are produced in low, transient, concentrations. Studies of the interactions of TDI and MDI with bioaquatic systems are difficult to execute consistently, due to the problem of formulating and controlling suitable conditions of chemical addition. However, the broad overview is that the ecological impact of such interactions is likely to be slight and reversible. III continues its work in these fields.

INTRODUCTION

Polyurethanes are remarkable materials which are used in many aspects of modern life, including insula-

tion, furnishing, construction, surface coatings, sport and medical care. In recent years a range of diisocyanates have been introduced in the manufacture of polyurethanes, but toluene diisocyanate (TDI) and methylene diphenylene diisocyanate (MDI) still dominate the field. World production of each is currently approaching 1 million tons per annum. The International Isocyanate Institute, Inc. (III) is an association of manufacturers of TDI and MDI, and its Member Companies produce a very large proportion of total world tonnage. The main aim of III is the promotion of the safe handling of TDI and MDI, and it has made a major contribution to our knowledge of the environmental effects of TDI and MDI through project sponsorship. Some of those projects are discussed here, within the context of the physical and chemical properties of TDI and MDI.

It has been known for many years that TDI and MDI can cause respiratory effects at very low concentrations. Accordingly, the production, handling, distribution, use and emission of these materials has been subject to increasingly rigorous control by the industry and regulatory bodies, to protect workers and the population at large. This has given rise to benefits in terms of environmental effects. As a result of engineering controls and well-defined procedures, large spillages are infrequent and usually dealt with effectively, and levels of emission are normally very low.

PRODUCTS AND PROPERTIES

TDI and MDI are supplied to the polyurethane industry as a variety of products, designed to give a range of handling characteristics and polyurethane product properties. These include 80/20-TDI, 65/35-TDI, TDI prepolymers, polymeric MDI, monomeric MDI, and variants of both types of MDI. Of these products 80/20-TDI and polymeric MDI still predominate: some of their physical properties (along with those of monomeric MDI) are given in Table 1.

TDI is sometimes referred to as a "highly reactive and volatile substance." Both points require qualification. The reactivity of TDI (to water and polyols) is normally only observed in catalysed chemical systems used for the production of polyurethanes. We shall see that in the environ-

ment the rate of reaction of TDI with water depends on a variety of factors. As regards volatility, TDI has much lower equilibrium vapour pressures than does water. Over the range 0–35°C those of TDI are ca 1000 times lower than those of water (see Table 1). At 25°C the equilibrium vapour concentration of TDI is 30 ppm: those for polymeric and pure MDI are considerably lower. The equilibrium vapour concentrations of modified MDIs and TDIs are even lower than those of the parent isocyanates. In Figure 1 is given the generally accepted sequence of reactions following the interaction of TDI with water.

Further reactions will almost certainly take place at the remaining NCO groups. A similar sequence can be illustrated for MDI. The unstable intermediate produced decomposes to the amine with the liberation of CO₂, and the amine reacts immediately with more diisocyanate to yield a polyurea. However, as Saunders and Frisch [6] point out, the interactions of diisocyanates and water are complex and may involve several mechanisms. It is a common misconception that in the presence of water TDI is converted to toluene diamine (TDA) in stoichiometric proportions. This is certainly not the case, but an important question is to what extent TDI (or MDI) gives rise to traces of TDA (or MDA—methylene dianiline) in the environment, in view of the toxic properties of aromatic amines.

EMISSIONS INTO THE AIR

Sources

TDI is used very predominantly for the production of flexible foam slabstock and moulding. Emissions from these processes are known to be richer in 2,6-TDI than is the 80/20 TDI starting material [7]. TDI emissions are often vented to atmosphere, but concentrations are rather low. In a study of six W. German flexible foam factories in 1979, the University of Stuttgart found [8] that stack concentrations were in the range 3–8 mg/m³, which represented about 0.005% of the total TDI used. In the UK and some states of the USA there are very rigorous requirements regarding emissions: "fenceline" concentrations of the order 0.003 mg/m³ (0.0004 ppm TDI) or lower are required in some cases.

As regards MDI, typical emission levels are more difficult to quantify, due to the diversity of applications and wide variety of MDIs (prepolymers and variants) which are used. According to the application the emissions may comprise (a) MDI vapour, (b) MDI aerosol (and vapour), or (c) reacting mix aerosol (and vapour) which will be converted predominantly to a polyurethane. In many applications emission levels are much lower than those from TDI flexible foam processes. About half of the MDI produced is used in moulding (or refrigerator) manufacture, which usually give extremely low emission levels. The British Rigid Urethane Foam Manufacturers' Association has carried out a recent survey [9] of Member Companies' polyurethane production facilities, in which insulation board is produced by spray and liquid laydown techniques, and rigid foam slabstock is produced by both continuous and discontinuous techniques: their production comprises about 50% of total UK rigid foam manufacture. Normal emission levels were found to be 0.2 mg/m³ or lower with occasional excursions above that level.

Developments in polyurethane processing and the control of emissions are leading to improved environmental conditions. Noteworthy here are (a) increasing use of RIM closed-circuit moulding technology and (b) developments in the carbon absorption of emissions [10]. Discussions

[11,12] are in progress in the flexible foam industry to assess the viability of co-absorption of TDI and chloro-fluorocarbon emissions, with subsequent recovery of the latter.

The Fate of TDI in the Atmosphere

Several workers [13-16] have carried out studies to investigate the kinetics and reaction products of TDI in the atmosphere. Most of these have been reviewed by Holdren et al. [17]. The results of work in this field should be considered in the light of (a) the highly adsorptive properties of TDI and (b) the possible conversion of TDI to TDA under the conditions of sampling and analysis: similar considerations apply to MDI. Walker and Pinches [18] sampled ambient air in flexible foam factories and concluded that appreciable quantities of TDA had been formed from TDI in the atmosphere. Sandridge [19], in a critique of the study, explained their findings in terms of interfering species in the analyses. Walker acknowledged [20] this possibility and agreed that their conclusions might have been erroneous, or at least, premature. Similar results have not been reported since.

A major study [17,21] on this topic has been carried out by Holdren, Spicer, and Riffin of the Battelle Institute, Columbus, Ohio, U.S.A. Experiments were carried out in a large (17 m³) chamber, lined with PTFE sheeting, in order to minimize wall effects. A series of atmospheres were generated in the chamber to simulate environmental conditions and to determine the parameters giving rise to loss of TDI from the gas phase. Experiments were carried out both in darkness and with irradiation. An important feature of the work was the use of many instrumental techniques to analyse the atmospheres. An assessment of the effects of the following was made (a) photolytic decomposition, (b) photochemically induced pollutants (eg., O₃, OH radicals), (c) urban hydrocarbon mixture and ammonium sulphate particles, (d) TEDA (triethylene diamine), a very commonly used catalyst and (e) possible conversion of TDI to TDA. Outline results of the study are given in Table 2: the final column gives the net loss rates, obtained by subtracting the wall loss rates from the average removal rates.

It was found that under the experimental conditions:

- The first order loss rate of TDI from the vapour phase in humid air (7-70% R.H.) and darkness was rather low (ca. 15% per hour).
- Irradiation caused an increase in loss rate (by ca. 20% per hour), the increase being mainly attributable to free radical attack. The loss rate was little affected by the presence of a variety of common atmospheric pollutants.
- The rate of TDI loss increased very considerably (by 44% per hour) when the level of TEDA vapour was increased from 0.2 ppm to 2 ppm under irradiation conditions.
- No TDA was found above the detection limit of 10 ng/ml, which would correspond to a maximum conversion of 0.05% TDI to TDA.
- Surface absorption onto the chamber lining was a significant removal mechanism.

The above findings indicate that TDI which is emitted during daylight hours has a half-life of about 3 hours, which is little affected by common atmospheric pollutants, and which is independent of relative humidity (7-70%). The loss rate may be affected by the presence of TEDA under factory conditions, although TEDA emission levels are normally well below 2 ppm in flexible foam manufacture, it is believed. There are other tertiary aliphatic amine catalysts, more volatile than TEDA (notably N-ethyl morpholine), which might affect TDI loss rates in practice. A study of emission levels of a range of amine catalysts used in flexible foam technology is currently in progress [22].

Fate of TDA, MDA and TDI under Photolytic Conditions

Theoretical considerations [23] indicate that direct formation of TDA (or MDA) from the corresponding diisocyanates by atmospheric hydrolysis processes is very unlikely, and the Battelle study results support this. Whilst it seemed unlikely that appreciable concentrations of TDA (or MDA) would arise from airborne TDI (or MDI),

Table 2. TDI removal rates.

Experiment	Urban Mix	Irradiation	TEDA	Other Species	Avg. TDI Removal Rate hr ⁻¹	Net Loss Rate (TDI Removal Rate Minus Wall Loss Rate) hr ⁻¹

10	Yes	Yes	0.2 ppm	—	0.55	0.20

*0.15/hr = 15%/hr (see text).

III funded a study to investigate the fate of airborne TDA and MDA, to address their possible formation from any source. The gas phase decomposition of TDI was also investigated. Present knowledge [24] indicates that tropospheric degradation of trace gases (excluding olefinic substances) are predominantly determined by their reactions with OH radicals. (The Battelle study had already indicated that free radical attack is a much more important mechanism than direct photolysis in gas-phase TDI loss.) Accordingly, the study [23], which was carried out by Becker, Bastian and Klein of Wuppertal University, F.R.G., was of OH radical attack. The reaction vessel was a 420 litre glass cylinder into which was introduced the given test substance at atmospheric pressure. Hydroxy radicals were generated by the photolysis of methyl nitrite in the presence of NO to prevent the formation of O₃ and NO₂ radicals. The loss rate of the test substance was compared with that of a reference material at 25°C, using long-path FT-IR absorption spectroscopy. The conditions of the experiments were such that the results relate only to gas phase losses, and not to deposition rates or heterogeneous reactions. Decomposition products were not investigated.

Tropospheric half lives (τ) under simulated conditions for the first order bimolecular reaction of the test substance with OH radical (concentration [OH]) were derived from the rate constants k_{OH} , where:

$$\tau = 0.69 (k_{OH} \times [OH])^{-1}$$

The results, along with those of some other substances as cited by Becker and co-workers, are given in Table 3.

The results indicate that under simulated atmospheric conditions the OH radical-initiated reactions of MDA and TDA are relatively fast and more rapid than those of TDI and of several hydrocarbons, for example. Under such conditions, the rate-determining step of a possible sequence:

generation of airborne TDI \longrightarrow

would be the generation of airborne TDI, and no accumulation of atmospheric TDA would result.

The investigators also studied gas-phase OH radical attack of TDI. The decay rate (0.053 hr⁻¹) was lower than that found by the Battelle Group (0.21 hr⁻¹), but they concluded that this was not unexpected in view of the scatter of results and not fully comparable experimental design. Experiments were carried out at 25°C and 28°C, respectively.

Combustion of TDI and MDI

Fire parameters of TDI and MDI have been studied under laboratory conditions [3,25]. The results are in accordance with practical experience, notably that they are ignited only with difficulty and do not support combustion easily. Their resistance to ignition is reflected in their flash points (Table 1), which are relatively high, compared to those of many products which are transported and stored under similar conditions [3]. Apart from the carefully controlled destruction of TDI and MDI in incinerators, it is likely that they would only be burnt in large acci-

Table 3. Hydroxyl radical attack of various substances.

Substance	Tropospheric 1/2 Lifetimes (hr)

TDA (2.4-)	0.5
TDA (2.6-)	1.0
MDA	3.2
Propane	82.0
Toluene	15.6
Aniline	0.8

dental fires. It is expected that the combustion products would not be dissimilar to those from a range of natural and synthetic nitrogen-containing compounds, and that no unique harmful products would be formed.

SOIL AND WATER

TDI and MDI may come into contact with soil or water following accidental spillage. Experience gained from such spillages indicates that they are usually well contained. Monomeric MDI (mp 38°C), when handled as a liquid, solidifies on contact with soil or water. Under many circumstances TDI (mp ca. 15°C) and many modified TDIs and MDIs solidify, too. Polymeric MDI solidifies only at low temperatures not usually encountered in the environment. However, polymeric MDI, as well as the other materials under consideration, has specific gravity and viscosity greater than those of water, and experience indicates that it rapidly sinks in water without becoming finely divided. This effect has even been observed in a fast-flowing stream.

Agglomerations of MDI and TDI react with water to form a hard crust of inert, water-insoluble material comprising polyureas. Analysis of such polymeric materials is very difficult and precise work on their composition has not been carried out. However, the products of reaction of polymeric MDI and 80/20 TDI with water investigated in animal studies have been found to give no observable acute effects. LD 50 values for both polymeric MDI- and 80/20 TDI-based polyureas were found [26] to be > 15 g/kg in rats (single gavages in peanut oil, period of observation 14 days, no fatalities).

Soil

Information on the interaction of isocyanates with soil or sand is important in terms of (a) the impact of accidental spillage onto soil and (b) the efficacy and possible environmental effects of using wet soil or sand as a means of decontaminating a spillage area. Large accidental spillages are usually decontaminated by the application of large quantities of water or by covering and mixing the diisocyanate with wet earth. The use of wet earth or sand is preferable, wherever local conditions allow it, because the diisocyanate remains localised and the mixture, when inactive, can be disposed of easily. Washing away material, especially from an impervious surface such as a factory floor or road, could cause further distribution of reacting

Table 4. Analysis of TDI (+ TDA) in soil samples.

After 1 week	TDI (+ TDA) = 0.20 to 100 ppm by wt.
After 6 weeks	TDI (+ TDA) = 0.06 to 1.0 ppm by wt.
After 1 year	TDA not detected (detection limit 0.1 ppm)
After 6 years	TDA not detected at 20-100 cm depth (detection limit 0.05 ppm)

material, and in a more finely divided state if high pressure hosing is used.

Studies on models have been carried out (a) to simulate the covering of a TDI spillage with wet sand and (b) to assess the chemical stability of polyureas prepared from ¹⁴C-labelled MDI and TDI in different agricultural soils. In addition, a study has been carried out on the environmental impact of an actual large spillage of TDI. These have been reviewed elsewhere [27,28], but the main points are outlined below.

The results [29] of model experiments indicated that TDI in undisturbed wet sand (coarse or fine) is converted to polyureas at a rapidly decreasing rate. After 24 hours, 5.5% of the original TDI was unreacted and after 8 days 3.5% remained. These findings can be explained in terms of the encapsulation of TDI within a forming crust of polyurea, which impedes the further penetration of water. No TDA was found above the detection limit of 0.01 ppm. In a separate study [30] the possible degradation of polyureas prepared from ¹⁴C-labelled MDI and TDI was studied in different agricultural soils. No degradation was detected: ¹⁴CO₂ was not evolved, indicating that TDA was not formed.

In April 1975 a road accident occurred, as a result of which 14 tons of TDI were deposited on marshy ground. The spillage was covered with absorbent materials (mainly sand). A six-year study [31] was carried out in close collaboration with the local authority to investigate the consequences of the incident. Outline findings are given in Table 4. No TDI (or TDA) were found in a brook connected to the marsh after intervals of 10 days and 12 weeks.

Analysis of samples at the 1-week and 6-week stages was carried out by a method which did not distinguish between TDI and TDA. It is assumed from the studies reported above that TDI was the predominant species. The results are again compatible with the encapsulation of TDI by a

polyurea crust. It is noteworthy that the vegetation at the site of the incident had developed normally during July 1975: grass grew normally, new foliage appeared on trees and flowers bloomed.

Water

III has funded a number of studies on the chemical and biological effects of MDI, MDA, TDI, and TDA in marine and river water models [32-35]. In addition, Curtis et al. [36] have investigated the toxicity of TDI to freshwater and saltwater organisms. Duff [27], and Brochhagen and Grieverson [28] have reviewed the above findings. Fujiwara [32] carried out studies on the presence of TDI, TDA, MDI, and MDA in marine and river water and in polyurea crusts, following the addition of the respective diisocyanates to the systems. Observations on the river model were made during spring, summer, autumn, and winter. Low concentrations of both diisocyanates and the respective diamines were found in most cases on day 1, but these were transient. It is not foreseen that aquatic life would be subject to long-term exposure from TDI, TDA, MDI, or MDA following a spillage of MDI or TDI. III studies devoted only to the effects of MDA and TDA on aquatic life will be reviewed in a future publication.

Caspers, Hamburger, Kanne, and Klebert [34] of Bayer AG, Leverkusen, F.R.G., have recently completed a comprehensive study for III of the effects of TDI and MDI (also TDA and MDA) on aquatic life, following OECD Guidelines 302C, 209, 202, and 203. Their outline results are presented in Table 5.

The results should be taken as indicators of the general overview of the immediate effects of acute exposure. Details of the methodology and analysis of the results, as presented in the original report, are required for an in-depth interpretation of the study. The findings, which are broadly in agreement with those of other workers [32,33], indicate that:

- The reaction products of TDI and MDI with water do not biodegrade readily.
- TDI and MDI are not appreciably toxic to bacteria.
- When dispersed in water with moderate efficiency, MDI and TDI are not appreciably toxic to daphnia: no negative effects on their reproduction were found at the highest concentrations used.
- Results on the toxicity of MDI and TDI to fish were rather inconsistent and the authors comment that harmful effects due to oral ingestion or mechanical violation of body tissues could not be excluded. The broad finding was that the immediate toxic effects of MDI and TDI due to acute exposure are rather low.

The investigators carried out several tests with very high shear stirring, and found increased fish and daphnia toxicity under such conditions: the results are not included here since such conditions could not be foreseen in the environment. A simple understanding of the acute fish toxicity of TDI and MDI can not be gained from the different LC 50 results of Hamburger et al., obtained at different stirring rates, taken along with the results of Fujiwara and Curtis et al., who each used different species and different experimental conditions. This is not unexpected. Such studies with MDI and TDI are especially difficult to interpret because of the inherent problem that the chemicals are almost totally insoluble in, and react with, the

Table 5. Results of Hamburger and co-workers.

Test	MDI	TDI
Biodegradation (Inherent) % in 28 days	None	None
Bacteria Toxicity (E. Coli) mg/l, 24 h	EC 50 > 100	EC 50 > 100
Daphnia Reproduction (Daphnia magna) mg/l, 24 h	no negative effects at highest concentration (TDI - 0.5, MDI - 10)	
Daphnia Toxicity (Daphnia magna) mg/l, 24 h	EC 50 ≥ 1000	EC 50 ~ 750
Fish Toxicity (Zebra fish) mg/l, 96 h	LC 0 > 1000	LC 0 > 100 LC 100 ≥ 250

medium to form insoluble products. OECD Guidelines do not define the mode of addition of such materials. Under different stirring conditions the physical form and the chemical composition of the reaction products will differ. In that respect it is interesting to note the comment of Curtis and co-workers [36] who found TDI hazardous to freshwater minnows (but not to saltwater shrimp): "The TDI appeared to be toxic to fathead minnows only in unreacted form, since all mortalities occurred during the first twelve hours of test. A concurrent decrease in pH was observed as a result of carbon dioxide formation." It is also possible that toxic effects could have resulted from the associated formation of carbon dioxide.

CONCLUSIONS

This paper suggests that the overall level of environmental pollution from TDI and MDI is very low. Emission levels are low and spillages of MDI or TDI are usually localized, and the diisocyanates very largely converted to materials which are chemically and biologically inert. There is, however, scope for further reductions of emissions or spillages, especially by those users who do not observe rigorous procedures for handling TDI and MDI.

When viewed in their entirety the investigations cited above provide an insight into the probable effects of MDI and TDI in the environment. The evidence indicates that the ecological impact is likely to be slight, and reversible. However, it is recognized that there are limitations to the reported studies of environmental effects. There are many difficulties inherent in the extrapolation from model systems to actual cases; also there are limitations to analytical techniques. Accordingly, the ICI continues its researches in this field in the interests of man and the environment.

ACKNOWLEDGEMENT

The author would like to thank colleagues in ICI Member Companies for their comments and suggestions, many of which have been incorporated into this text.

BIOGRAPHY

David S. Gilbert

Having graduated in industrial chemistry, David Gilbert undertook research studies of the kinetics of organic chemical reactions, notably using radiochemical techniques to follow symmetrical exchange reactions. Most of his career has been in polyurethanes, working with ICI on elastomers, flexible foams and rigid foams. In 1982 he established the consultancy David Gilbert Associates and now works exclusively for the ICI.

MATERIAL SAFETY DATA

SECTION I - IDENTIFICATION

MSDS FILE 563

CHEMICAL NAME & SYNONYMS Toluene Diisocyanate 80-20		
CHEMICAL FAMILY Isocyanate	FORMULA $C_9H_6N_2O_2$	PRODUCT TDI 80-20
DESCRIPTION Clear colorless to pale yellow liquid with sharp pungent odor		CAS NO. 26471-62-5

SECTION II - NORMAL HANDLING PROCEDURES

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE Do not take internally. Do not get in eyes, on skin or clothing. Upon contact with skin or eyes, wash off with water. Avoid breathing mist or vapor. Protect against physical damage. Store in a cool, dry, well-ventilated place, away from areas where a fire hazard may be acute. Outside or detached storage is preferred. Blanket storage tanks with inert gas (nitrogen) or dry air. Separate from oxidizing materials.	
PROTECTIVE EQUIPMENT	VENTILATION REQUIREMENTS
EYES Goggles	As required to keep airborne concentrations below TLV
GLOVES Rubber, NBR or PVA	
OTHER Coveralls, impervious footwear	

SECTION III - HAZARDOUS INGREDIENTS

BASIC MATERIAL	OSHA PEL	LD50	LC50	SIGNIFICANT EFFECTS
Toluene-2,4-diisocyanate	0.02 ppm ceiling	5.8 g/kg (rat)	10 ppm/4 hrs (mouse)	Skin, eye, mucous membrane irritation. Pulmonary irritant. Allergic sensitization to skin and respiratory tract. May cause asthma attacks.
Toluene-2,6-diisocyanate	None established	No data	11 ppm/4 hrs-mouse	Irritation

SECTION IV - FIRE AND EXPLOSION HAZARD DATA

FLASH POINT 270°F COC METHOD	OSHA CLASSIFICATION Not Regulated (Ignitable)	FLAMMABLE EXPLOSIVE LIMIT	LOWER 0.8%	UPPER 9.5%
EXTINGUISHING MEDIA Water, carbon dioxide or dry chemical. Use water to keep the exposed containers cool.				
SPECIAL FIRE HAZARD & FIRE FIGHTING PROCEDURES Water spray should be used to cool fire exposed containers and/or to disperse unignited vapors. Use NIOSH/MSHA approved positive pressure self-contained breathing apparatus when any material is involved in a fire.				

SECTION V - HEALTH HAZARD DATA

THRESHOLD LIMIT VALUE 0.005 ppm TWA, 0.02 ppm STEL - 2.4 TDI (ACGIH 1986-87)
SYMPTOMS OF OVER EXPOSURE May cause irritation to eyes, throat, lungs, stomach, skin. Allergic sensitization to skin and respiratory tract. May cause asthma attacks
EMERGENCY FIRST-AID PROCEDURES
SKIN Immediately flush thoroughly with water for 15 minutes. call a physician.
EYES Immediately flush thoroughly with water for 15 minutes. call a physician.
INGESTION Immediately drink water to dilute.

SECTION VI - TOXICOLOGY (PRODUCT)

ACUTE ORAL LD 50
5.8 g/kg (rats)
ACUTE DERMAL LD 50
> 2 g/kg (rabbits)
ACUTE INHALATION LC 50
10 ppm/4 hrs (mouse)

CARCINOGENICITY Oral Exposure-Positive NTP Bioassay
MUTAGENICITY Not known to be mutagenic
EYE IRRITATION Irritation and/or burns
PRIMARY SKIN IRRITATION
Irritation and/or burns

PRINCIPAL ROUTES OF ABSORPTION

Inhalation, dermal

EFFECTS OF ACUTE EXPOSURE May cause irritation to lungs, eyes, throat, stomach, skin. Allergic sensitization of skin and respiratory tract. Corneal injury may occur.

EFFECTS OF CHRONIC EXPOSURE Damage/allergic sensitization to lungs. Inhalation studies indicate not carcinogenic. Carcinogenic risk from industrial use is not significant.

SECTION VII - SPILL AND LEAKAGE PROCEDURES (CONTROL PROCEDURES)

ACTION FOR MATERIAL RELEASE OR SPILL

Wear NIOSH/MSHA approved positive pressure supplied air respirator. Follow OSHA regulations for respirator use (see 29 CFR 1910.134). Wear goggles, coveralls and impervious gloves and boots. Add dry non-combustible absorbent, sweep up material and place in an approved DOT container. Add an equal amount of neutralizing solution to the container (90-95% water, 5-10% ammonia). Clean remaining surfaces with neutralizing solution and add this to container. Isolate container in a well-ventilated place and do not seal for 24 hrs. Ammonia vapors may be generated until solution is neutralized. Wash all contaminated clothing before reuse. In the event of a large spill use the telephone number shown on the front of this sheet.

TRANSPORTATION EMERGENCY, CONTACT CHEMTREC 800-424-9300

WASTE DISPOSAL METHOD

Dispose of contaminated product, empty containers and materials used in cleaning up spills or leaks in a manner approved for this material. Consult appropriate Federal, State and local regulatory agencies to ascertain proper disposal procedures.

SECTION VIII - SHIPPING DATA

D.O.T. Toluene diisocyanate Poison B UN 2078

Rubinate® TDI 80/20

Safety, Storage and Handling Procedures for Rubinate TDI 80/20 Toluene Diisocyanate

RB-14 rev

SAFETY PRECAUTIONS

All isocyanates are potentially hazardous materials (as defined by the OSHA Hazard Communication Standard, 29 CFR 1910.1200) and require extreme care in handling. It is essential that all persons involved with the handling of these products be familiar with the proper safety and handling procedures.

Rubinate TDI 80/20 (toluene diisocyanate) is a liquid at ambient temperature. At these temperatures, Rubinate TDI has a relatively high vapor pressure and a vapor hazard exists. In the absence of adequate ventilation, it is likely to exceed recommended control limits.

The current OSHA Permissible Exposure Limit (PEL) for toluene-2,4-diisocyanate (TDI) is 0.02 ppm as a ceiling value (not to be exceeded at any time). The ACGIH Threshold Limit Value (TLV) for TDI is 0.005 ppm 8 hour TWA and 0.02 ppm Short Term Exposure Limit (STEL). NIOSH recommends a 0.005 ppm 8 hour TWA and a 10 minute 0.02 ppm ceiling limit. Personnel who may be exposed to isocyanate vapors above the TLV must wear an air-fed hood or approved respirator to avoid overexposure. Repeated inhalation of the vapor at low levels above the TLV could cause serious respiratory problems.

Rubinate TDI is a reactive chemical and great care must be taken when handling it to prevent ingestion or contact with the skin or eyes. The use of goggles or face shield, PVC or rubber gloves and apron will reduce chances of injury from contact with the product.

If splashes accidentally reach the eyes, immediately flush the eyes with plenty of water for at least 15 minutes and call a physician. Wash any material from the skin with soap and plenty of water. Immediately remove any contaminated clothing or shoes. If redness, itching or a burning sensation develops after exposure, or following repeated or prolonged skin contact, seek medical attention. Wash clothing and decontaminate shoes before reuse. If ingestion occurs, do not induce vomiting. Administer large amounts of milk or

water and contact a physician. If irritation or respiratory problems develop after inhalation of TDI, get to fresh air and seek medical attention. TDI may induce acute irritant reactions or hypersensitivity reactions such as asthma-like respiration responses, in exposed persons. These reactions may be delayed for up to several hours after exposure. Persons previously sensitized to TDI should be removed from all exposure.

See the Material Safety Data Sheet for Rubinate TDI 80/20 for additional details.

IN CASE OF SPILLS

In case of spills, be sure that area is well ventilated. If necessary, evacuate spill area to prevent inhalation of vapor from the spill. Skin, eye and respiratory protection must be worn during spill cleanup. Dike spill and soak up chemical with a commercial absorbent or sand and shovel into waste container. loosely cover container and remove it from the work area. Soak contents of waste container with an aqueous decontamination solution of 3-8% ammonia and 0.2-0.5% detergent for 48 hours. Dispose of treated waste in accordance with waste disposal regulations.

Empty containers should not be disposed of until all hazardous residue has been removed. Remove container from work area, preferably outdoors, or in a well-ventilated area. Fill container with decontamination solution and allow to stand for 48 hours. Do not seal or otherwise close bungs in container. After draining the container, puncture or crush it and dispose of it in accordance with waste disposal regulations.

FIRE HAZARD

Most isocyanates have a high flash point and are not normally considered as flammable. However, they may burn if heated sufficiently.

Any isocyanate involved in a fire will evolve toxic fumes in high concentrations. Full emergency equipment should be worn by all personnel dealing with such incidents; the use of self-contained breathing apparatus is essential. Drums of isocya-

nate involved in a fire should be sprayed with water to minimize risk of rupture.

After the fire has been extinguished, the area should not be considered safe until a thorough inspection for residual isocyanate has been carried out by properly protected personnel. Any suspect residues should be rendered harmless with liquid decontaminant.

Suitable extinguishing agents include:

Dry chemical powder

Carbon dioxide

Water*

Foam

*If water is used, it should be in a very large quantity. Care must be taken as the reaction between water and hot isocyanate may be vigorous.

STORAGE PRECAUTIONS

Moisture, either as a vapor or liquid, is the most probable cause of isocyanate contamination. Rubinate® TDI 80/20 reacts readily with water, producing solid deposits and evolution of carbon dioxide gas. Storage under a slight positive pressure (a few inches water gauge) of dry nitrogen (-40°F , -40°C dew point) is essential to prevent ingress of moisture. Care should be taken, however, in using any pressure above 20 psig., as increasing solubility of the gas in the isocyanate may adversely affect further processing steps or products. Carbon dioxide should not be used for this purpose at any pressure because of its solubility in isocyanates. Pay particular attention to maintaining a dry atmosphere in vessels from which the isocyanate is being pumped or those being cooled. The recommended storage temperature for Rubinate TDI 80/20 is between $70-100^{\circ}\text{F}$ ($21-38^{\circ}\text{C}$).

RECOMMENDED EQUIPMENT

Storage Tanks

Rubinate TDI 80/20 can be stored in a stainless steel, carbon steel, or a suitable resin-lined vessel. Use of copper-bearing steel tanks is not recommended. The size of the storage vessel will depend primarily on the scale of production. It is recommended for minimum requirements that two vessels be installed, each having a capacity approximately 20% greater than that of the usual transport container. With this arrangement, successive deliveries can be discharged to the vessels alternately. If only one bulk storage vessel is installed, it is advisable that the nominal capacity be approximately 50% greater than that of the transport container.

For best flow and storage stability, maintain at recommended temperatures. The vessels should be insulated and provided with a heating system. Heat tanks by carefully designed electrical tracing. Internal coils are not advised because of the chance of leakages causing contamination of the product.

The outlet nozzle from the tank should be raised 3' to 6' from the floor of the tank to prevent transfer of any solids or foreign matter to further processing stages. A drain valve should be located at the bottom of the tank.

Fit vessels with temperature and level indicators. Pressure and vacuum relief devices are advisable to protect the tank in case of blockages in the vent line.

Vessels should be designed to API Standards, with due allowance made for the specific gravity of the material. Under normal conditions, no internal corrosion allowance is necessary.

Pumps

Pumps can be stainless steel, ductile iron, or carbon steel. Stainless steel, Type 316, is preferred.

Exact details of pump sizing will vary with the layout of storage tanks, unloading facilities and scope of facility.

Pumps may be either centrifugal or rotary type. Positive displacement rotary pumps are preferred, due to the lower operating speeds. Such pumps must be equipped with relief valve bypass returning to the tank. Glandless pumps (such as Chem-pump or Kontro, etc.) give no leakage but are more expensive.

Pump seals are critical to prevent moisture contamination. A single outside mechanical seal will work satisfactorily if kept warm and dry. Double mechanical static seals are preferred.

Piping

Pipe and fittings conveying isocyanates can be made from any of the materials indicated for pumps or containers. Stainless steel is preferred. Care must be taken in sizing pressure loss valves to ensure that pump capacity, suction and discharge are not reduced. Clean carbon steel pipe, Schedule 40, with 150# fittings may be used if the cost of stainless steel proves to be prohibitive.

Flexible pipe may be double braid reinforced stainless steel hose. For smooth flow and for increased protection, PTFE or butyl rubber lined hose is preferred. Pressure or vacuum rating of hose should be compatible with pump characteristics.

Joints in stainless steel pipe should be made with stainless steel stub ends and carbon steel flanges, 150# rating. Carbon steel pipe joints may be made with 150# weld neck or slip-on flanges. Screwed joints can be used if installed with care and tape thread sealant is used.

Piping located outdoors, and where the isocyanate is likely to be trapped, should be hot-water traced or wrapped with electric heating tape and insulated. Do not heat sections of pipe between closed valves which are completely filled with material, as thermal expansions of the material could lead to failure of the joints.

Clean all new piping with solvent to remove oil and then dry before assembly.

The entire piping system should be designed to ensure proper drainage and should be specified as "silicone free."

Filter

A suitably heated filter is desirable between the off-loading pump and the machine tank or reactor.

Valves

Satisfactory results can be obtained with PTFE-lined plug, diaphragm or ball valves. The valves should have PTFE self-lubricating seals.

Valves should be flanged to 150# standard.

Venting

The bulk storage tank and the tank in which TDI is received should be vented in a manner similar to shown on the diagrammatic flow plan. Dry nitrogen should be used (dew point -40°F , -40°C).

Venting through an activated carbon vent scrubber may be required in those locations prohibiting TDI emissions. The efficiency of such a scrubber should be monitored to ensure its proper operation.

For more detailed information or assistance in the Safety, Storage and Handling of Rubinate® TDI 80/20, contact your ICI Polyurethanes Group representative.

FOR YOUR PROTECTION

The information and recommendations in this publication are, to the best of our knowledge, reliable. Suggestions made concerning the products and their uses, applications, storage and handling are only the opinion of ICI Polyurethanes Group and users should make their own tests to determine the suitability of these products for their own particular purposes and of the storage and handling methods herein suggested. The toxicity and risk characteristics of products made by ICI Polyurethanes Group will necessarily differ from the toxicity and risk characteristics developed when such products are used with other materials during a manufacturing process. The resulting risk characteristics should be determined and made known to ultimate end-users and processors. Because of numerous factors affecting results, ICI Polyurethanes Group **MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING THOSE OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE**, other than that the material conforms to its applicable current Standard Specifications. Statements made herein, therefore, should not be construed as representations or warranties. The responsibility of ICI Polyurethanes Group for claims arising out of breach of warranty, negligence, strict liability, or otherwise is limited to the purchase price of the material.

Statements concerning the use of the products or formulations described herein are not to be construed as recommending the infringement of any patent and no liability for infringement arising out of any such use is assumed.

BULK STORAGE FACILITIES
RUBINATE® TDI 80/20 ISOCYANATE

NOTES:

1. PRODUCT TEMPERATURE CONTROL IS IMPORTANT TO MAINTAIN QUALITY. CONSULT ICI SALESMAN FOR SPECIFIC TEMPERATURE RANGES.
2. DO NOT ALLOW STAGNANT PRODUCT IN LINES FOR LONG PERIODS.
3. TEMPERATURE MAINTENANCE IS REQUIRED.
4. STORAGE TANK IS RECOMMENDED TO BE STAINLESS STEEL.
5. ADEQUATE PROVISIONS MUST BE MADE TO PROTECT TANK TRUCK OR RAIL CAR FROM EXCESSIVE PLANT LINE PRESSURE.
6. EMERGENCY VENT SHOULD BE SIZED TO HANDLE REACTION PRODUCTS (I.e. GAS AND FOAM) FROM FOAM-PRODUCING REACTIONS.
7. PCV SHOULD BE LOCATED IDEALLY AT MACHINE TANK TO PREVENT STAGNATION OF PRODUCT IN LINE.

BLUE DENOTES AIR AND GAS LINES.
BLACK DENOTES PRODUCT.

apparatus and full protective clothing.

4. REACTIVITY DATA:

STABILITY: (CONDITIONS TO AVOID) Stable when stored under recommended storage conditions. Store in a dry place at temperatures between 18-41C (65-105F).

INCOMPATIBILITY: (SPECIFIC MATERIALS TO AVOID) Water, acid, base, alcohols, metal compounds, surface active materials. Avoid water as it reacts to form heat, CO₂ and insoluble urea. The combined effect of the CO₂ and heat can produce enough pressure to rupture a closed container.

HAZARDOUS DECOMPOSITION PRODUCTS: Isocyanate vapor and mist, carbon dioxide, carbon monoxide, nitrogen oxides and traces of hydrogen cyanide.

HAZARDOUS POLYMERIZATION: May occur with incompatible reactants, especially strong bases, water or temperatures over 41C (105F).

5. ENVIRONMENTAL AND DISPOSAL INFORMATION:

ACTION TO TAKE FOR SPILLS/LEAKS:

Evacuate and ventilate spill area, dike spill to prevent entry into water system, wear full protective equipment including respiratory equipment during clean up.

Major spill: Call Dow Chemical U.S.A. (409) 238-2112. If transportation spill involved call CHEMTREC (800) 424-9300. If temporary control of isocyanate vapor is required a blanket of protein foam (available at most fire departments) may be placed over the spill. Large quantities may be pumped into closed but not sealed containers for disposal.

Minor spill: Absorb the isocyanate with sawdust or other absorbent and shovel into open top containers. Do not make pressure tight. Transport to a well-ventilated area (outside) and treat with neutralizing solution consisting of a mixture of

5. ENVIRONMENTAL AND DISPOSAL INFORMATION: (CONTINUED)

water and 3-8% concentrated ammonium hydroxide or 5-10% sodium carbonate. Add about 10 parts of neutralizer per part of isocyanate with mixing. Allow to stand for 48 hours letting evolved carbon dioxide to escape.

Clean-up: Decontaminate floor using water/ammonia solution with 1-2% added detergent letting stand over affected area for at least 10 minutes. Cover mops and brooms used for this with plastic and dispose properly (often by incineration).

DISPOSAL METHOD: Follow all federal, state and local regulations. Liquids are usually incinerated in a proper facility. Solids are usually also incinerated or landfilled. Empty drums should be filled with water. Let drum stand unsealed for 48 hours. Before disposal drums should be drained, triple rinsed, and holed to prevent reuse. Dispose of drain and rinse fluid according to federal, state and local laws and regulations. The most commonly accepted method is in an approved wastewater treatment facility. Drums should be disposed of in accordance with federal, state and local laws and regulations. Commonly accepted methods for disposal of plastic drums are disposal in an approved landfill after shredding or incineration in an approved industrial incinerator or other appropriate incinerator facility. Steel drums are commonly disposed in an approved landfill after crushing or in accordance with other approved procedures.

6. HEALTH HAZARD DATA:

EYE: May cause pain, severe eye irritation and moderate corneal injury. Vapors may irritate eyes.

SKIN CONTACT: Prolonged or repeated exposure may cause severe irritation, even a burn. Skin contact may result in allergic reaction even though it is not expected to result in absorption of amounts sufficient to cause other adverse effects.

SKIN ABSORPTION: The LD50 for skin absorption in rabbits is >9400 mg/kg.

* An Operating Unit Of The Dow Chemical Company

M A T E R I A L S A F E T Y D A T A S H E E T

Dow Chemical U.S.A.* Midland, MI 48674 Emergency Phone: 517-636-4400

Product Code: 92097 Page: 4
PRODUCT NAME: VORANATE (R) T-80 TYPE I TOLUENE DIISOCYANATE

Effective Date: 12/13/88 Date Printed: 05/03/89 MSD: 000609

6. HEALTH HAZARD DATA: (CONTINUED)

INGESTION: Single dose oral toxicity is low. The oral LD50 for rats is 5800 mg/kg. Ingestion may cause gastrointestinal irritation or ulceration.

INHALATION: Excessive vapor concentrations are attainable and could be hazardous on single exposure. Single and repeated excessive exposure may cause severe irritation to upper respiratory tract and lungs (choking sensation, chest tightness), respiratory sensitization, decreased ventilatory capacity, liver effects, cholinesterase depression, gastrointestinal distress and/or neurologic disorders. The 4-hour LC50 for TDI for rats is 13.9 ppm.

SYSTEMIC & OTHER EFFECTS: Based on available data, repeated exposures are not anticipated to cause any additional significant adverse effects. For hazard communication purposes under OSHA standard 29 CFR Part 1910.1200, this chemical is listed as a potential carcinogen by Nat'l. Tox. Program and IARC. An oral study in which high doses of TDI were reported to cause cancer in animals has been found to contain numerous deficiencies which compromise the validity of the study. TDI did not cause cancer in laboratory animals exposed by inhalation, the most likely route of exposure. Birth defects are unlikely. Exposures having no effect on the mother should have no effect on the fetus. Did not cause birth defects in animals; other effects were seen in the fetus only at doses which caused toxic effects to the mother. Results of in vitro ("test tube") mutagenicity tests have been inconclusive.

7. FIRST AID:

EYES: Irrigate with flowing water immediately and continuously for 15 minutes. Consult medical personnel.

SKIN: In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician if irritation persists. Wash clothing before reuse. Destroy contaminated shoes.

INGESTION: Do not induce vomiting. Call a physician and/or

7. FIRST AID: (CONTINUED)

transport to emergency facility immediately.

INHALATION: Remove to fresh air. If not breathing, give mouth-to-mouth resuscitation. If breathing is difficult, give oxygen. Call a physician.

NOTE TO PHYSICIAN: May cause tissue destruction leading to stricture. If lavage is performed, suggest endotracheal and/or esophagoscopy control. If burn is present, treat as any thermal burn, after decontamination. No specific antidote. Supportive care. Treatment based on judgment of the physician in response to reactions of the patient. The manifestations of the respiratory symptoms, including pulmonary edema, resulting from acute exposure may be delayed. May cause respiratory sensitization. Cholinesterase inhibition has been noted in human exposure but is not of benefit in determining exposure and is not correlated with signs of exposure.

8. HANDLING PRECAUTIONS:

EXPOSURE GUIDELINE(S): OSHA PEL is 0.02 ppm as a ceiling limit for toluene 2,4-diisocyanate. ACGIH TLV is 0.005 ppm; 0.02 ppm STEL for toluene 2,4-diisocyanate. Dow Industrial Hygiene Guide is 0.02 ppm as a ceiling limit for toluene diisocyanate.

VENTILATION: Provide general and/or local exhaust ventilation to control airborne levels below the exposure guidelines.

RESPIRATORY PROTECTION: Atmospheric levels should be maintained below the exposure guideline. When respiratory protection is required for certain operations, use an approved supplied-air respirator. For emergency and other conditions where the exposure guideline may be greatly exceeded, use an approved positive-pressure self-contained breathing apparatus.

SKIN PROTECTION: Use protective clothing impervious to this material. Selection of specific items such as gloves, boots, apron, or full-body suit will depend on operation. Remove contaminated clothing immediately, wash skin area with soap and water, and launder clothing before reuse. Safety shower should

be located in immediate work area.

EYE PROTECTION: Use chemical goggles. If vapor exposure causes eye irritation, use a full-face, supplied-air respirator. Eye wash fountain should be located in immediate work area.

9. ADDITIONAL INFORMATION:

REGULATORY REQUIREMENTS:

SARA HAZARD CATEGORY: This product has been reviewed according to the EPA 'Hazard Categories' promulgated under Sections 311 and 312 of the Superfund Amendment and Reauthorization Act of 1986 (SARA Title III) and is considered, under applicable definitions, to meet the following categories:

An immediate health hazard
A delayed health hazard
A reactive hazard

SPECIAL PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE: Warning properties of this material (irritation of eyes, nose and throat) not adequate to prevent chronic overexposure from inhalation. This material can produce asthmatic sensitization upon either single inhalation exposure to a relatively high concentration or upon repeated inhalation exposure to lower concentrations. Exposures to vapors of heated TDI can be extremely dangerous. (Have TDI neutralizer available for spills.)

MSDS STATUS: Revised Section 9

SARA 313 INFORMATION:

This product contains the following substances subject to the reporting requirements of section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40 CFR Part 372:

SECTION 1 NAME AND HAZARD SUMMARY

Material name:
RUBINATE® TDI

Hazard summary (as defined by OSHA Hazard Comm. Std., 29 CFR 1910.1200):

Physical hazards: Unstable.

Health hazards: Corrosive (eye), irritant (skin, respiratory passages, skin sensitizer), inhalation (TLV), harmful pulmonary (lung) sensitizer. Based on TDI – harmful (respiratory sensitizer, lung injury).

Read the entire MSDS for a more thorough evaluation of the hazards.

SECTION 2 INGREDIENTS

	%	TLV (ACGIH)
Toluene diisocyanate, 2,4-isomer (CAS 584-84-9)	80	0.005 ppm
Toluene diisocyanate, 2,6-isomer (CAS 91-08-7)	20	Not listed

Ingredients not precisely identified are proprietary or nonhazardous. Values are not product specifications.

SECTION 3 PHYSICAL DATA

Appearance and odor: Clear, colorless liquid with sharp odor

Boiling point: 484°F, 251.1°C

Vapor pressure (mm Hg at 20°C): 0.02

Vapor density (air = 1): 6.0

Solubility in water: Reacts

pH: No data

Specific gravity: 1.22

% Volatile by volume: No data

SECTION 4 FIRE AND EXPLOSION HAZARD DATA

Flash point: 270°F, 132°C (OC)

Autoignition temperature: No data

Flammable limits (STP): 0.9-9.5%

SECTION 4 FIRE AND EXPLOSION HAZARD DATA (continued)

Extinguishing media:

Dry chemical, foam, carbon dioxide, halogenated agents. If water is used, use very large quantities. The reaction between water and hot isocyanate may be vigorous.

Special fire fighting protective equipment:

Self-contained breathing apparatus with full facepiece and protective clothing.

Unusual fire and explosion hazards:

Water contamination will produce carbon dioxide. Do not reseal contaminated containers as pressure buildup may rupture them.

SECTION 5 REACTIVITY DATA

Stability:

Stable under normal conditions.

Incompatibility:

This product will react with any materials containing active hydrogens, such as water, alcohol, ammonia, amines, alkalies and acids. The reaction with water is very slow under 50°C, but is accelerated at a higher temperatures and in the presence of alkalies, tertiary amines, and metal compounds. Some reactions can be violent.

Hazardous decomposition products:

Combustion products: Carbon dioxide, carbon monoxide, nitrogen oxides, ammonia. Trace amounts of hydrogen cyanide.

Hazardous polymerization:

May occur. High temperatures in the presence of alkalies, tertiary amines, and metal compounds will accelerate polymerization. Possible evolution of carbon dioxide gas may rupture closed containers.

SECTION 6 HEALTH HAZARD ASSESSMENT

General:

The health hazard assessment is based on an evaluation of the chemical composition together with information from a search of the scientific literature and other commercial sources.

Ingestion:

The acute oral LD₅₀ in rat is reported to be 5,800 mg/kg. Relative to other materials, this material is classified as "practically nontoxic" by ingestion. In humans, irritation or chemical burns of the mouth, pharynx, esophagus and stomach can develop following ingestion. Injury may be severe and cause death.

Eye contact:

This material is reported to induce chemical burns in rabbit eye studies; a similar degree of eye injury may develop after contact with human eyes.

Skin contact:

This material is reported to be severely irritating in rabbit dermal irritation studies and will probably irritate human skin. Skin sensitization and irritation may develop after repeated and/or prolonged contact with human skin.

SECTION 6 HEALTH HAZARD ASSESSMENT (continued)**Skin absorption:**

The acute dermal LD₅₀ in rabbit is reported to be above 16 g/kg. Systematically toxic concentrations of this product will probably not be absorbed through human skin.

Inhalation:

Vapors and aerosols can irritate eyes, nose and respiratory passages. TDI vapors are easily generated and are lethal to rats via inhalation at concentrations below 10 ppm. A no effect level for rats of about 0.1 ppm was determined from a subacute study. This and other data indicate the vapors and aerosols of TDI are highly toxic relative to the vapors of other compounds. Vapors and aerosols of TDI strongly irritate the upper and lower respiratory tract. Human experience indicates that TDI will induce an asthma-like respiratory sensitization in some individuals. If applications which involve spraying (e.g., aerosols and mists) or if elevated temperatures are used, even higher vapor concentrations may result and introduce a greater degree of risk of inhalation injury. Rat and mouse toxicity and carcinogenicity studies were conducted with two years of inhalation exposure to vapors of TDI at concentrations of 0.05 and 0.15 ppm. No indication of carcinogenic effect was observed. However, mice exposed to 0.15 ppm for two years showed reduced weight gain and signs of irritation in the upper and lower respiratory tract. No other effect of toxicological significance was observed.

Other effects of overexposure:

There are two studies which allege that workers exposed to TDI at or near the current TLV have experienced impaired ventilatory capacities. These findings have not been independently substantiated. The National Toxicology Program (NTP) 4th Annual Report on Carcinogens (1985) lists TDI as a substance that may reasonably be anticipated to be a carcinogen based on a NTP Technical Report. In the cited study, laboratory animals gavaged TDI in corn oil developed cancer. In our view, the inhalation study is of more potential biological relevance to man.

First aid procedures:

Skin: Wash material off of the skin with plenty of soap and water. If redness, itching, or a burning sensation develops, get medical attention. Wash contaminated clothing and decontaminate footwear before reuse.

Eyes: Immediately flush with plenty of water. After initial flushing, remove any contact lenses and continue flushing for at least 15 minutes. Have eyes examined and treated by medical personnel.

Ingestion: Do not induce vomiting. Give 1 or 2 glasses of water to drink and refer person to medical personnel. (Never give anything by mouth to an unconscious person.)

Inhalation: Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. If breathing is labored, give oxygen. Consult medical personnel.

Note to physician: Probable mucosal damage may contraindicate the use of gastric lavage following ingestion.

SECTION 7 SPILL OR LEAK PROCEDURES**Steps to be taken in case material is released or spilled:**

Wear skin, eye, and respiratory protection during cleanup. Soak up material with an absorbent and shovel into waste container. Cover container, but do not seal, and remove it from the work area. Prepare a decontamination solution of 0.2-5% liquid detergent and 3-8% concentrated ammonium hydroxide in water (5-10% sodium carbonate may be substituted for the ammonium hydroxide). Follow the precautions on the supplier's material safety data sheets. All operations should be performed by trained personnel familiar with the hazards of the chemicals used. Treat the spill area with the decontamination solution, using about 10 parts of the solution for each part of the spill, and allow it to react for at least 10 minutes. Carbon dioxide will be evolved, leaving insoluble polyureas. For major spills, call CHEMTREC (Chemical Transportation Emergency Center) at 800-424-9300.

SECTION 7 SPILL OR LEAK PROCEDURES (continued)

Disposal method:

Slowly stir the isocyanate waste into the decontamination solution described above using 10 parts of the solution for each part of isocyanate. Let stand for 48 hours, allowing the evolved carbon dioxide to vent away. Neutralize the waste. Neither the solid nor the liquid portion is a hazardous waste under RCRA, 40 CFR 261.

Container disposal:

Drums must be decontaminated in properly ventilated areas by personnel protected from the inhalation of isocyanate vapors. Spray or pour 5-15 liters of decontaminating solution into the drum, making sure the walls are well rinsed. Leave the drum soaking unsealed for 48 hours. Pour out the decontaminating solution and triple rinse the empty container. Puncture or otherwise destroy the rinsed container before disposal.

SECTION 8 SPECIAL PROTECTION INFORMATION

TLV® or suggested control value:

The ACGIH TLV and OSHA PEL for TDI is 0.005 ppm 8-hour TWA, 0.02 ppm ceiling. NIOSH recommends 0.005 ppm TWA and 0.02 ppm STEL.

Ventilation:

If needed, use local exhaust ventilation to keep airborne concentrations below the TLV. Follow guidelines in the ACGIH publication "Industrial Ventilation". Exhaust air may need to be cleaned by scrubbers or filters to reduce environmental contamination.

Respiratory protection:

Because of the low vapor pressure, ventilation is usually sufficient to keep vapors below the TLV at room temperatures. Exceptions are when the material is sprayed or heated. If airborne concentrations exceed or are expected to exceed the TLV, use MSHA/NIOSH approved positive pressure supplied air respirator with a full facepiece or an air supplied hood. For emergencies, use a positive pressure self-contained breathing apparatus. Air purifying (cartridge type) respirators are not approved for protection against isocyanates.

Protective clothing:

Gloves determined to be impervious under the conditions of use. Depending on conditions of use, additional protection may be required such as apron, arm covers, or full body suit. Wash contaminated clothing before rewearing. The literature indicates that clothing constructed of butyl rubber, Viton, Silver Shield, Saranex coated Tyvek, as well as some nitrile rubber and polyvinyl alcohol (PVA) coated garments have excellent resistance to permeation by TDI. Clothing constructed of Teflon, as well as some garments constructed of nitrile rubber, natural rubber and PVA exhibited limited resistance to permeation by TDI. Some clothing constructed of natural rubber or polyethylene exhibited little resistance to permeation by TDI. Protective clothing should be selected and used in accordance with "Guidelines for the Selection of Chemical Protective Clothing" published by ACGIH.

Eye protection:

Chemical tight goggles and full faceshield.

Other protective equipment:

Eyewash station and safety shower in work area.

SECTION 9 SPECIAL PRECAUTIONS OR OTHER COMMENTS

Special precautions or other comments:

Prevent skin and eye contact. Observe TLV limitations. Avoid breathing vapors or aerosols. Workers should shower and change to fresh clothing after each shift. A sensitized individual should not be exposed to the product which caused the sensitization. Store in tightly sealed containers to protect from atmospheric moisture. Store in a cool area. Individuals with existing respiratory disease such as chronic bronchitis, emphysema or asthma should not be exposed to isocyanates. These individuals should be identified through baseline and annual evaluation and removed from further exposure. Medical examination should include medical history, vital capacity, and forced expiratory volume at one second.

SECTION 10 REGULATORY INFORMATION

TSCA (Toxic Substances Control Act) Regulations, 40 CFR 710:

All ingredients are on the TSCA Section 8(b) Inventory.

CERCLA and SARA Regulations (40 CFR 355, 370, and 372):

Section 313 Supplier Notification. This product contains the following toxic chemicals subject to the reporting requirements of Section 313 of the Emergency Planning and Community Right-To-Know Act of 1986 and of 40 CFR 372: 100% TDI (CAS 584-84-9 and 91-08-7).

State Regulations:

California Proposition 65: No warnings are necessary.

The information herein is given in good faith but no warranty, expressed or implied, is made.
